Minds Matter An Intellectual Biography:

Descartes: An Intellectual Biography Stephen Gaukroger, 1995-03-30 Descartes is one of the greatest of all thinkers Modern philosophy is generally taken to begin with him His unique contribution to Western thought covers not only philosophy but also science and mathematics his studies in mechanics and optics have provided modern science with tools still used and work still built on today This is the first intellectual biography of Descartes in English Stephen Gaukroger traces his intellectual development from childhood establishes the connections between his intellectual and personal life and placing these in the context of the cultural environment of the time offers a fundamental reassessment of all aspects of his life and work It is usually assumed that there is a little development in Descartes thought but this biography shows evidence of very significant changes of view and a general shift in his concern away from natural philosophy following the condemnation of Galileo by the Church in 1633 Starting with a full account of Descartes early scientific work Dr Gaukroger shows how it informed and influenced his later philosophical studies On this new view Descartes philosophical work was meant not a self contained exercise in epistemology and scepticism but rather as a defence of his physical doctrines against a hostile Church This book allows for the first time a full understanding of Descartes ideas in the context of his life and times It will be welcomed by all readers interested in the origins of modern thought

An Intellectual History of Psychology

Daniel N. Robinson, 1995-09-01 An Intellectual History of Psychology already a classic in its field is now available in a concise new third edition It presents psychological ideas as part of a greater web of thinking throughout history about the essentials of human nature interwoven with ideas from philosophy science religion art literature and politics Daniel N Robinson demonstrates that from the dawn of rigorous and self critical inquiry in ancient Greece reflections about human nature have been inextricably linked to the cultures from which they arose and each definable historical age has added its own character and tone to this long tradition An Intellectual History of Psychology not only explores the most significant ideas about human nature from ancient to modern times but also examines the broader social and scientific contexts in which these concepts were articulated and defended Robinson treats each epoch whether ancient Greece or Renaissance Florence or Enlightenment France in its own terms revealing the problems that dominated the age and engaged the energies of leading thinkers Robinson also explores the abiding tension between humanistic and scientific perspectives assessing the most convincing positions on each side of the debate Invaluable as a text for students and as a stimulating and insightful overview for scholars and practicing psychologists this volume can be read either as a history of psychology in both its philosophical and aspiring scientific periods or as a concise history of Western philosophy s concepts of human nature
