Hywel Thomas, Brian Gillham, 2013-10-22 *Wills Biochemical Basis of Medicine* Second Edition provides a basic understanding of the structure and metabolic processes in the context in which they occur in the cell or in the tissues This book provides groundwork of academic biochemistry and demonstrations of the application of biochemistry to medicine Organized into five parts encompassing 43 chapters this edition begins with an overview of the biochemistry of the subcellular organelles This text then examines the functions of the nucleus mitochondria and the endoplasmic reticulum Other chapters consider the biochemistry of the hormones and the regulation of the metabolic

fuels This book discusses as well the biochemistry of environmental hazards and examines the treatment of viral carcinogenesis The final chapter deals with the results of the application of recombinant DNA technology to the diagnosis of genetic disorder This book is a valuable resource for biochemists biologists physicians clinical researchers and medical students **Archives of Internal Medicine** ,1929 **Life Strategies, Human Evolution, Environmental Design** V. Geist,2013-11-11 Consider that you were asked how to ensure human survival Where would you begin Conservation of resources jumps to mind We need to conserve resources in order that economic activities may continue Alas this is a false start Resources are always defined by a given economic system and only it determines what is and what is not a resource Therefore conserving resources implies only the perpetuation of the appropriate economic system Conservation of resources as we know them has nothing to do with the survival of mankind but it has very much to do with the survival of the industrial system and society we live in today We have to start therefore at a more basic level This level some may argue is addressed by ensuring for human beings clean genes Again this is a mistaken beginning It is thoroughly mistaken for reasons of science It is a false start because malfunctioning organs and morphological structures are not only due to deleterious hereditary factors but particularly due to unfavorable environments during early growth and development Moreover eugenics is not acceptable to any but a small fraction of society Eugenics may not be irrelevant to our future but is premature and should be of little concern until we understand how human genes and environment interact **Faces of Medicine** W.J. van der Steen,P.J. Thung,2012-12-06 1 MEDICINE Illness disease and disability plague man in every culture But the form they take is not the same everywhere Neither is man's reaction Coping strategies and the experience and knowledge backing them depend very much on cultural setting So medicine the fabric of strategy and knowledge can only be understood in the context of culture In western society today severe judgements are passed on medicine Its store of knowledge and experience and its repertory of strategies have grown immensely during the last few decades But it hardly alleviates dominant ailments especially chronic diseases diseases of old age and disturbances of social and mental functioning We know that these ailments have come to the fore as the incidence of more primitive diseases declined in industrial societies Infant deaths and malnutrition and infections striking at young age have dwindled to marginal significance in Western Europe and life expectancy at birth is twice that of some 150 years ago Thus our new troubles are connected with past successes
