Emerging Infectious Diseases, 2000

Emerging Infectious Diseases from the Global to the Local Perspective Institute of Medicine, Board on Global Health, Forum on Emerging Infections, 2001-04-29 In October 1999 the Forum on Emerging Infections of the Institute of Medicine convened a two day workshop titled International Aspects of Emerging Infections Key representatives from the international community explored the forces that drive emerging infectious diseases to prominence Representatives from the Americas Africa Asia and the Pacific and Europe made formal presentations and engaged in panel discussions Emerging Infectious Diseases from the Global to the Local Perspective includes summaries of the formal presentations and suggests an agenda for future action The topics addressed cover a wide range of issues including trends in the incidence of infectious diseases around the world descriptions of the wide variety of factors that contribute to the emergence and reemergence of these diseases efforts to coordinate surveillance activities and responses within and across borders and the resource research and international needs that remain to be addressed

Microbial Threats to Health Institute of Medicine, Board on Global Health, Committee on Emerging Microbial Threats to Health in the 21st Century, 2003-09-25 Infectious diseases are a global hazard that puts every nation and every person at risk The recent

SARS outbreak is a prime example. Knowing neither geographic nor political borders often arriving silently and lethally, microbial pathogens constitute a grave threat to the health of humans. Indeed, a majority of countries recently identified the spread of infectious disease as the greatest global problem they confront. Throughout history, humans have struggled to control both the causes and consequences of infectious diseases, and we will continue to do so into the foreseeable future. Following up on a high profile 1992 report from the Institute of Medicine, *Microbial Threats to Health* examines the current state of knowledge and policy pertaining to emerging and re-emerging infectious diseases from around the globe. It examines the spectrum of microbial threats, factors in disease emergence, and the ultimate capacity of the United States to meet the challenges posed by microbial threats to human health. From the impact of war or technology on disease emergence to the development of enhanced disease surveillance and vaccine strategies, *Microbial Threats to Health* contains valuable information for researchers, students, health care providers, policymakers, public health officials, and the interested public.

Textbook of Administrative Psychiatry John A. Talbott, Robert E. Hales, 2001. This textbook provides the practitioner and student of administration in behavioral healthcare an overview of the evolving behavioral health system, core and new administrative psychiatry concepts, new roles for behavioral health players, how selected behavioral health systems are changing the trend toward integrated systems, and law and ethics.

Revival: Your Life Or Mine (2003) Martine Rothblatt, 2017-07-05. This title was first published in 2003. Xenotransplantation, the transplantation of animal organs into humans, poses a fascinating moral dilemma. Should this ability to extend the lives of millions of older people be permitted, given that it might trigger a new pandemic similar to AIDS? This study examines the moral dilemma from a combination of humanistic, legalistic, bioethical, economical, and technological perspectives. The first part of the book demonstrates that xenografts are the only realistic near-term technological answer to the organ shortage problem. The balance of the book is devoted to assessing whether doctrines such as the right to health care trump the moral and ethical conundrums posed by xenotransplantation. The book concludes with a geoethical solution that proposes authorization of xenotransplantation subject to the prior implementation of a new international organization for epidemiology and basic health care. It also suggests that the costs of operating such an organization could be covered by a global tax on xenografts.

Morbidity and Mortality Weekly Report, 2004.

Public Health Systems and Emerging Infections Institute of Medicine, Division of Health Sciences Policy, Forum on Emerging Infections, 2000-07-08. The Forum on Emerging Infections was created in 1996 in response to a request from the Centers for Disease Control and Prevention and the National Institutes of Health. The goal of the forum is to provide structured opportunities for representatives from academia, industry, professional and interest groups, and government to examine and discuss scientific and policy issues that relate to research, prevention, detection, and management of emerging infectious diseases. A critical part of this mission has been the convening of a series of workshops. *Public Health Systems and Emerging Infections* summarizes the fourth in a series of five workshops. With a focus on our

knowledge and understanding of the role of private and public health sectors in emerging infectious disease surveillance and response the participants explored the effects of privatization of public health laboratories and the modernization of public health care The issues discussed included epidemiological investigation surveillance communication coordination resource allocations and economic support **Twenty-first Century Biological Threats** United States.
