Electrometallurgical Techniques for DOE Spent Fuel Treatment National Research Council, Commission on Physical Sciences, Mathematics, and Applications, Board on Chemical Sciences and Technology, Committee on Electrometallurgical Techniques for DOE Spent Fuel Treatment, 2000-08-11 The Committee on Electrometallurgical Techniques for DOE Spent Fuel Treatment was formed in September 1994 in response to a request made to the National Research Council NRC by the U S Department of Energy DOE DOE requested an evaluation of electrometallurgical processing technology proposed by Argonne National Laboratory ANL for the treatment of DOE spent nuclear fuel Electrometallurgical treatment of spent reactor fuel involves a set of operations designed to remove the remaining uranium metal and to incorporate the radioactive nuclides into well defined and reproducible waste streams Over the course of the committee s operating life this charge has remained constant Within the framework of this overall charge the scope of the committee s work as defined by its statement of task has evolved in response to further requests from DOE as well as technical accomplishments and regulatory and legal considerations As part of its task the committee has provided periodic assessments of ANL s R D program on the electrometallurgical technology Electrometallurgical Techniques for DOE Spent Fuel Treatment assesses the viability of electrometallurgical technology for treating DOE spent nuclear fuel and monitors the scientific and technical progress of the ANL program on electrometallurgical technology specifically within the context of ANL s demonstration project on electrometallurgical treatment of EBR II SNF This report evaluates ANL s performance

relative to the success criteria for the demonstration project which have served as the basis for judging the efficacy of using electrometallurgical technology for the treatment of EBR II spent nuclear fuel. It also addresses post demonstration activities related to ANL's electrometallurgical demonstration project and makes related recommendations in this area.

Weekly Information Report, 1995-05 Nuclear Energy David Bodansky, 2007-06-25 This second edition represents an extensive revision of the first edition though the motivation for the book and the intended audiences as described in the previous preface remain the same. The overall length has been increased substantially with revised or expanded discussions of a number of topics including Yucca Mountain repository plans, new reactor designs, health effects of radiation, costs of electricity and dangers from terrorism and weapons proliferation. The overall status of nuclear power has changed rather little over the past eight years. Nuclear reactor construction remains at a very low ebb in much of the world with the exception of Asia while nuclear power's share of the electricity supply continues to be about 75% in France and 20% in the United States. However, there is a sign of a heightened interest in considering possible nuclear growth. In the late 1990s the U.S. Department of Energy began new programs to stimulate research and planning for future reactors and many candidate designs are now contending at least on paper to be the next generation leaders. Outside the United States the commercial development of the Pebble Bed Modular Reactor is being pursued in South Africa; a French-German consortium has won an order from Finland for the long planned EPR European Pressurized Water Reactor and new reactors have been built or planned in Asia. In an unanticipated positive development for nuclear energy the capacity factor of U.S. reactors has increased dramatically in recent years and most operating reactors now appear headed for 20 year license renewals.

The Future of U.S. Nuclear Weapons Policy National Academy of Sciences, Committee on International Security and Arms Control, 1997-06-17 The debate about appropriate purposes and policies for U.S. nuclear weapons has been under way since the beginning of the nuclear age. With the end of the Cold War the debate has entered a new phase propelled by the post Cold War transformations of the international political landscape. This volume based on an exhaustive reexamination of issues addressed in *The Future of the U.S. Soviet Nuclear Relationship* NRC 1991 describes the state to which U.S. and Russian nuclear forces and policies have evolved since the Cold War ended. The book evaluates a regime of progressive constraints for future U.S. nuclear weapons policy that includes further reductions in nuclear forces, changes in nuclear operations to preserve deterrence but enhance operational safety and measures to help prevent proliferation of

nuclear weapons In addition it examines the conditions and means by which comprehensive nuclear disarmament could become feasible and desirable **SIPRI Yearbook 2008** Stockholm International Peace Research Institute, 2008 The 39th edition of the SIPRI Yearbook analyses developments in 2007 in Security and conflicts Military spending and armaments Non proliferation arms control and disarmament The SIPRI Yearbook contains extensive annexes on the implementation of arms control and disarmament agreements and a chronology of events during the year in the area of security and arms control

Nuclear Energy: Promise Or Peril? C R Hill, A L Mechelynek, Georges Ripka, B C C Van Der Zwaan, 1999-08-16 Nuclear energy will inevitably become an important issue worldwide in the 21st century It pollutes the environment with consequences that are highly controversial and it generates plutonium the essential component of nuclear weapons At the same time it is a realistic alternative to at least some of the expected huge increase in global demand for fossil fuel burning which itself is a major source of environmental pollution and not least of greenhouse gases This invaluable book attempts to provide for the non technical reader an objective and critical account of the main issues involved The authors are authorities in their own fields and their contributions have been read in manuscript discussed and criticised by a wider international group of experts Thus whilst much of its contents may arouse controversy the book should be an excellent starting point for informed public discussion of a vitally important topic *Energy and Water Development Appropriations for 2008:*
