Multiple Objective Decision Making — Methods and Applications C.-L. Hwang, A.S.M. Masud, 2012-12-06 Decision making is the process of selecting a possible course of action from all the available alternatives In almost all such problems the multiplicity of criteria for judging the alternatives is pervasive That is for many such problems the decision maker OM wants to attain more than one objective or goal in selecting the course of action while satisfying the constraints dictated by environment processes and resources Another characteristic of these problems is that the objectives are apparently non commensurable Mathematically these problems can be represented as $\max_{x \in S} f(x)$ subject to $g_i(x) \leq 0$ where x is an n dimensional decision variable vector The problem consists of n decision variables m constraints and k objectives Any or all of the functions may be nonlinear In literature this problem is often referred to as a vector maximum problem VMP Traditionally there are two approaches for solving the VMP One of them is to optimize one of the objectives while appending the other objectives to a constraint set so that the optimal solution would satisfy these objectives at least up to a predetermined level The problem is given as $\max_{x \in S} f_1(x)$ subject to $f_2(x) \geq \alpha$ where α is any acceptable predetermined level for objective f_2 The other approach is to optimize a super objective function created by multiplying each f_i objective function with a suitable weight and then by adding them together

Decision Making with Multiple Objectives Yacov Y. Haimes, Vira Chankong, 2012-12-06 The Sixth International Multiple Criteria Decision Making MCDM Conference is one of a biennial series that serve as a forum for exchange of the latest information and new developments in this rapidly growing field. Participants are carefully chosen from among scholars and practitioners so that widely ranging perspectives and disciplines are represented; this insures the dissemination of valuable new knowledge to those scholars, policy makers and industrial analysts who will best utilize and share it both in developed and in third world countries. The Sixth International MCDM Conference was held from June 4 to 8 1984 at Case Western Reserve University, Cleveland, Ohio. The Conference program reflects the evolution of the field from infancy through adolescence to maturity as marked by the progression from single objective modeling and optimization to multiple objective decision making. Because the theoreticians, practitioners and students who attend these MCDM conferences necessarily have different needs and expectations, the program now offers fewer monologues and more panels, overview papers and tutorial sessions focusing on case studies and other practical experiences.

Operations and Production Systems with Multiple Objectives Behnam Malakooti, 2013-11-26 The first comprehensive book to uniquely combine the three fields of systems engineering, operations, production systems and multiple criteria decision making optimization. Systems engineering is the art and science of designing engineering and building complex systems combining art, science, management and engineering disciplines. Operations and Production Systems with Multiple Objectives covers all classical topics of operations and production systems as well as new topics not seen in any similar textbooks before: small scale design of cellular systems, large scale design of complex systems, clustering, productivity and efficiency measurements and energy systems. Filled with completely new perspectives, paradigms and robust methods of solving classic and modern problems, the book includes numerous examples and sample spreadsheets for solving each problem, a solutions manual and a book companion site complete with worked examples and supplemental articles. Operations and Production Systems with Multiple Objectives will teach readers how operations and production systems are designed and planned, how operations and production systems are engineered and optimized, how to formulate and solve manufacturing systems problems, how to model and solve interdisciplinary and systems engineering problems, how to solve decision problems with multiple and conflicting objectives. This book is ideal for senior undergraduate, MS and PhD graduate students in all fields of engineering, business and management as well as practitioners and researchers in systems engineering, operations, production and manufacturing.

Multi-Objective Stochastic Programming in Fuzzy Environments Biswas, Animesh, De, Arnab Kumar, 2019-03-22 It is frequently observed that most decision making problems involve several objectives and the aim of the decision makers is to find the best decision by fulfilling the aspiration levels of all the objectives. Multi objective decision making is especially suitable for the design and planning steps and allows a decision maker to achieve the optimal or aspired goals by considering the various interactions of the given constraints. Multi Objective
