This special issue of *Gastroenterology Report* is directed at “Evidence-based management of gastrointestinal (GI) diseases”. Gastroenterologists are now using a range of diagnostic tests and therapies that were largely unavailable twenty years ago. Ours is a fast-moving field, with innovations being developed at a rapid pace.

Included in this issue are authoritative reviews on how to manage a wide variety of conditions that affect the GI and biliary tracts using both established and emerging technologies, with emphasis on evidence to support the best practices and to achieve the best possible outcomes for our patients; for example, much has changed as regards our diagnostic accuracy in celiac disease. In the past 20 years the field has been revolutionized by the development of the current diagnostic test of choice: serum IgA antibody against tissue transglutaminase (IgA-tTG). This assay replaced the earlier “gold standard”, the anti-endomysial antibody (EMA). As reviewed in detail by Castillo et al. in this issue [1], IgA-tTG is the screening test of choice for detecting celiac disease in practice, with a specificity and sensitivity above 95%. Importantly, the incidence of celiac disease in Europe and North America approaches 1% of the population, but many patients are undiagnosed because they do not exhibit classic signs or symptoms of disease such as chronic diarrhea, weight loss, malabsorption or anemia.

Bondrate and colleagues provide a useful and detailed review of non-invasive breath tests using ^{13}C , a stable and non-radioactive isotope, to assess liver metabolic function and gastric emptying [2]. These tests can be used safely in children and during pregnancy to provide useful data for clinical research or for patient management; for example, breath excretion of ^{13}C phenylalanine can predict post-operative hepatic complications and post-resection liver regeneration. Similarly, sophisticated

breath tests can non-invasively and safely measure hepatic mitochondrial and microsomal function.

One of the most difficult clinical situations is the question of whether a biliary structure is benign or malignant. Singh et al. provide an authoritative and practical guide comparing the use of conventional techniques (endoscopic retrograde cholangiopancreatography (ERCP), endoscopic ultrasonography (EUS) with fine needle aspiration (FNA), and emerging approaches (intrahepatic ultrasound, cholangioscopy and confocal biliary microscopy) to differentiate neoplastic bile duct strictures [3]. These latter techniques still require refinement and further experience, but will probably be added to our diagnostic algorithms in the coming years.

A much-feared complication of ERCP is pancreatitis, which can range from mild pain with hyperamylasemia, to catastrophic pancreatitis with phlegmon or abscess formation. Thaker et al. provide an evidence-based approach to the causes and clinical features of this condition, and provide some guidelines for avoiding post-ERCP pancreatitis (PEP) including patient selection, use of guidewire, avoidance of multiple cannulation attempts or injections and the use of a temporary stent in the pancreatic duct in high-risk patients [4]. Rectal suppositories containing non-steroid anti-inflammatory drugs (NSAIDs) after ERCP to prevent PEP has now been adopted in many high-volume ERCP centers.

Refractory gastroesophageal reflux disease (GERD) is increasingly recognized in patients with reflux esophagitis, who continue to have symptoms despite appropriate therapy with proton pump inhibitors (PPIs). Subramanian et al. outline a logical and practical plan for optimizing the management of these patients. Increasing the dose of PPI to twice daily or switching to another type of PPI is successful in some patients [5].

Management Of Gastrointestinal Diseases

Management Of Gastrointestinal Diseases:

Management of Gastrointestinal Diseases in the Elderly Alberto Pilotto, 2007-01-01 The study and care of gastrointestinal disorders in the elderly have become priority topics for both clinicians and researchers as the aged constitute an ever increasing part of the overall population This publication presents the results of recent studies in geriatric gastroenterology reviewing both basic research and clinical aspects A significant part is devoted to the physician's clinical approach to the elderly suffering from specific gastroenterological problems Another focal point is diagnostic testing which becomes very important in old age because clinical features such as history and physical signs are often very difficult to interpret clinical manifestations and the response to therapy may seem to differ because the older patient has several concomitant disorders that may distort the classic features of the primary gastrointestinal disease Also discussed are the effects of aging on the physiology of the gastrointestinal tract and liver functions as well as the management of disorders of the small intestine colon and liver This publication will be useful for general physicians specialists in geriatrics and gastroenterology and all healthcare providers who are involved in planning care management of elderly people with gastrointestinal disorders

cutting edge scientific investigations that have shed light on its pharmacological activities **Gastrointestinal Damage and Metabolic Disorders** Daniele Maria-Ferreira, Marcelo Biondaro Gois, Elizabeth S. Fernandes, 2025-08-19

Gastrointestinal GI disorders can be described as physiologic and or morphologic changes in the GI system and include motility disorders changes in mucosal and immune function and alterations in the intestinal microbiota Inflammatory bowel diseases such as ulcerative colitis and Crohn s disease are the most serious disorders causing chronic inflammation while other chronic inflammatory diseases that cause severe damage include irritable bowel syndrome and gastroesophageal reflux The main causes of these diseases include genetic predisposition unhealthy lifestyles pharmacological therapies and infections Regardless of the specific disorder it is known to cause considerable discomfort and a reduced quality of life for those affected and there is increasing evidence that damage to the gastrointestinal tract can influence the development of metabolic diseases For example impaired release of gut hormones responsible for signaling the feeling of satiety could be associated with the occurrence of obesity long term alterations in the composition of the gut microbiota may play a role in the development of metabolic diseases among others *Advances in Novel Drugs and Targets for Hepatic and Gastrointestinal Diseases* Yong Gao, Aijun Qiao, Xiaoying Yang, 2024-01-29 The global incidence of gastrointestinal and hepatic diseases has been gradually increasing in recent years which seriously threatens human health and increases the economic burden More importantly gastrointestinal and hepatic malignancies have the highest incidence and mortality rates among all tumors such as liver cancer stomach cancer colon cancer and pancreatic cancer There are also non neoplastic diseases such as viral hepatitis cirrhosis nonalcoholic steatohepatitis chronic atrophic gastritis ulcerative colitis and reflux esophageal disease that also affect patients quality of life Although progress has been made in the pathogenesis of gastrointestinal and hepatic diseases and corresponding therapeutic drugs have been also developed the specific mechanisms of the diseases are still not revealed and there is a lack of specific drugs In view of this this topic aims to explore new molecular mechanisms of pathogenesis and potential therapeutic agents and pharmacological effects of gastrointestinal and hepatic diseases
