Co-management, Or No Management? Eyolf Jul-Larsen, Food and Agriculture Organization of the United

Nations,2003-01-01 The Synthesis report synthesises the findings of the ten case studies in southern African freshwater fisheries published in FAO Fisheries technical paper 426 2 *Management Guidelines for Asian Floodplain River Fisheries*

Daniel D. Hoggarth,1999 Management, Co-Management Or No Management? Food and Agriculture Organization of the

United Nations,2003-01-01 This publication contains reports of ten case studies of freshwater fisheries in southern Africa which were conducted in five medium sized lakes in the Democratic Republic of the Congo Malawi Zambia and Zimbabwe

Five of the case studies focus on the biological and environmental effects of fishing while the remaining five are concerned with historical and sociological analysis The Mekong Ian Charles Campbell,2009-11-20 The Mekong is the most

controversial river in Southeast Asia and increasingly the focus of international attention It flows through 6 countries China Myanmar Laos Thailand Cambodia and Viet Nam The 4 downstream countries have formed the Mekong River Commission to promote sustainable development of the river and many of their people depend on it for their subsistence it has possible the largest freshwater fishery in the world and the Mekong waters support rice agriculture in the delta in Viet Nam which produces about 40% of that country s food as well as in Cambodia Laos and Thailand China is now building the first large

mainstream dam on the river and has proposals for several more. These dams are likely to affect the downstream countries. Several of the downstream countries also have plans for large scale hydropower and irrigation development which could also impact the river. This book will provide a solid overview of the biophysical environment of the Mekong together with a discussion of the possible impacts biophysical, economic and social of some possible development scenarios. It is intended to provide a technical basis which can inform the growing political and conservation debate about the future of the Mekong River and those who depend on it. It is aimed at river ecologists, geographers, environmentalists and development specialists both in the basin and especially outside for whom access to this material is most difficult. This book will be the first comprehensive treatment of the Mekong system. The first comprehensive overview of all aspects of the Mekong River system. Deals with a regionally critical ecosystem and one under threat. The Mekong supports the world's largest freshwater fishery and provides water underpinning a major regional rice paddy system. Presents the authoritative findings of the Mekong River Commission's research for a wider audience for the first time outside of limited distribution reports.

Good practices guidelines for data collection systems to support sustainable inland and recreational fisheries in the Western Balkans region
Visser, T.A.M, Valbo-Jorgensen, J., Chomo, V., 2021-02-26. These guidelines illustrate recommendations for good practices on data collection in Eastern European inland fisheries and in particular the Western Balkan region based on the methodologies and approaches used in countries throughout Europe and from FAO experience of inland fisheries in other regions. They provide guidance on the options available to inland fishery managers based on particular circumstances i.e. commercial fishing or recreational use and they are especially relevant for assisting the economies in transition in Europe, Caucasus and Central Asia. These guidelines are not an overarching work on inland fisheries management nor do they provide advice on the environmental aspects or competing uses of inland water bodies. They focus on issues of data collection to support fishery managers whether they be government agencies, fishers or angler associations co-responsible for the management of inland resources in European rivers and lakes.

Stock Assessment for Fishery Management Daniel D. Hoggarth, 2006-01-01. Provides guidelines for fish stock assessment and fishery management using the software tools developed by the UK's Department for International Development's Fisheries Management Science Programme. This report explains some key elements of the precautionary approach to fisheries management and outlines a range of alternative stock assessment approaches.

Management of impacts of irrigation development on fisheries: guidance manual, **Management Guidelines for Asian Floodplain River Fisheries: Summary of DFID research**, 1999 **Freshwater Fisheries Ecology** John F. Craig, 2016-01-12. Inland fisheries are vital for the livelihoods and food resources of humans worldwide but their importance is underestimated probably because large numbers of small local operators are involved. Freshwater Fisheries Ecology defines what we have globally, what we are going to lose and mitigate for and what, given the right tools, we can save. To estimate potential production the dynamics of freshwater ecosystems, rivers, lakes and estuaries need to be

understood These dynamics are diverse as are the earth's freshwater fisheries resources from boreal to tropical regions and these influence how fisheries are both utilized and abused Three main types of fisheries are illustrated within the book: artisanal, commercial and recreational and the tools which have evolved for fisheries governance and management including assessment methods are described The book also covers in detail fisheries development providing information on improving fisheries through environmental and habitat evaluation, enhancement and rehabilitation, aquaculture, genetically modified fishes and sustainability The book thoroughly reviews the negative impacts on fisheries including excessive harvesting, climate change, toxicology, impoundments, barriers and obstructions, non-native species and eutrophication Finally, key areas of future research are outlined Freshwater Fisheries Ecology is truly a landmark publication containing contributions from over 100 leading experts and supported by the Fisheries Society of the British Isles The global approach makes this book essential reading for fish biologists, fisheries scientists and ecologists and upper level students in these disciplines Libraries in all universities and research establishments where biological and fisheries sciences are studied and taught should have multiple copies of this hugely valuable resource About the Editor John Craig is Editor in Chief of the Journal of Fish Biology and has an enormous range of expertise and a wealth of knowledge of freshwater fishes and their ecology having studied them around the globe including in Asia, North America, Africa, the Middle East and Europe His particular interests have been in population dynamics and life history strategies He is a Fellow of the Linnean Society of London and the Royal Society of Biology

Rivers and Sustainable Development S. Nazrul Islam, 2020-08-15 Rivers are a vital component of ecology the earth's hydrological cycle depends on them However across the world rivers are under stress and even in crisis With rising populations the demand for river water is increasing Many rivers fail to reach the sea because of excessive withdrawal of water and many other rivers are heading toward the same fate Conflicts over river water are increasing and climate change is making matters worse River policies pursued so far are often aggravating these challenges rather than solving them Yet sustainable development requires healthy rivers Urgent change in the approach and policies toward rivers is therefore required In this book Nazrul Islam points to the ways in which river policies need to change to ensure sustainable development He offers a new conceptual framework using such concepts as the Commercial and Cordon approaches to rivers and their opposite the Ecological and Open approaches He shows that while the former generally work against sustainability the latter are conducive to sustainable development The book illustrates this reality by drawing upon worldwide experience regarding rivers Going forward river policies therefore should be based on Ecological and Open approaches Islam argues further that the use of the new conceptual framework offered in this book can help to connect the river-related discussion of experts with that of activists It can thus help to move the discussion of river policies from the narrow confines of experts to the wider arena of the public who should have a greater role in formulation of river policies in order to safeguard public interests and ensure sustainability The book serves as a valuable guide for those interested in learning about river policy

changes necessary to promote sustainable development Increasing the Contribution of Small-scale Fisheries to Poverty Alleviation and Food Security Christophe Béné, Graeme Macfadyen, Edward Hugh Allison, Food and Agriculture Organization of the United Nations, 2007 The third and main section of the document discusses ways of increasing the contribution of small scale fisheries to poverty alleviation and food security through nine main entry points First the paper revisits conventional fisheries policies and legislation and makes suggestions on how those can be made more pro poor Next the paper emphasizes the importance of capacity building and highlights how cross sectoral interventions can greatly improve the livelihoods of fish dependent communities The paper then proposes a series of broad pro poor or pro small scale fisheries principles before discussing in greater detail three of the main management instruments adopted in fisheries i property right approaches ii co management and iii protected areas The next two sub sections discuss markets and how to make them work for the poor and the important issue of pro poor financing systems and subsidies *FAO Publications Titles in Print* Food and Agriculture Organization of the United Nations, 1999
