Project Management in Manufacturing and High Technology Operations

Adedeji Bodunde Badiru,1996-06-07 Project management is a system originally developed within the construction industry for controlling schedules costs and specifications of large multitask projects In recent years manufacturers have discovered that project management s time tested techniques dovetail neatly with the current thinking on quality control and management in a highly competitive global marketplace The system has been increasingly recognized for its suitability in the manufacturing process and is now applied in virtually every area of production One of the foremost proponents of this trend is Adedeji Badiru an internationally recognized authority on project management whose books have helped thousands of companies adapt the system to their particular needs This completely revised Second Edition of Badiru s breakthrough publication Project Management in Manufacturing and High Technology Operations focuses on the dramatic increase in the use of high tech machinery in industrial operations and seamlessly integrates high tech themes into a general discussion of project management An introductory chapter on manufacturing analysis investigates how the latest concepts and techniques of project management are applied to manufacturing The main body of the book offers a wealth of new material including discussions of learning curve analysis basic models for forecasting and inventory control economic analysis of manufacturing techniques for data analysis and the application of expert systems The chapter on computer applications in project management is completely revised and updated to reflect the enormous strides taken in this area in recent years This book presents an up to date practical approach to project management in manufacturing Written by a pioneer in the application of project management to the manufacturing industries this revised and expanded Second Edition of Project Management in Manufacturing and High Technology Operations reflects the increased use of high tech machinery in industrial operations and the trends of recent years to apply project management methods to every phase of production Complete with numerous illustrations as well as exercises to wrap up each chapter this Second Edition features An emphasis on practical examples including many new case studies and a full chapter on the lessons learned from the space shuttle Challenger disaster Many new project management concepts and techniques that focus on manufacturing but can be applied to any project A new chapter on manufacturing systems analysis that provides the backdrop for the project analysis that takes place throughout the book Expanded discussions of the latest quantitative and managerial approaches including learning curve analysis basic

models for forecasting and inventory control economic analysis of manufacturing techniques for data analysis and the application of expert systems A strong international perspective useful for multinational companies and for academic purposes This book equips engineers and managers with the tools to effectively manage all aspects of a project including quality control schedules and expenses Used as a text in engineering or business courses it offers absorbing supplemental reading for students at the upper undergraduate and graduate levels Professor Badiru has been widely praised for his incisive and highly relevant case studies In this Second Edition the case study approach is expanded so that chapters typically include two real world examples of the project management techniques or issues in question In the final chapter Badiru takes a close and painful look at a high tech disaster the explosion of the space shuttle Challenger He offers rare and instructive insight into the devastating failure of a high tech project still poignant despite the passage of time Communicative throughout this volume provides a solid up to date reference for engineers and managers in manufacturing as well as for consultants and administrators in related fields Professor Badiru's proven reputation for providing interesting lecture material also makes Project Management in Manufacturing and High Technology Operations especially useful as a technology management text in both engineering and business schools Cover Design Illustration David Levy

Introduction to Management Science Bernard W. Taylor (III.), 1986 Multiple Criteria Decision Making Theory and Application G. Fandel, T. Gal, 2012-12-06 He considers a cone dominance problem given a preference cone LP and a set $n \times R$ of available or feasible alternatives the problem is to identify the non dominated elements of X The nonzero elements of LP are assumed to model the dominance structure of the problem so that $y \in X$ dominates $x \in X$ if $Y \cdot x \leq P$ for some nonzero $p \in S$ LP Consequently $x \in X$ is nondominated if and only if $x \in LP \cap X \times 1$ He will also refer to nondominated points as efficient points in X with respect to LP and we will let $EF(X, P)$ denote the set of such efficient points This cone dominance problem draws its roots from two separate but related origins The first of these is multi attribute decision making in which the elements of the set X are endowed with various attributes each to be maximized or minimized **Distribution of Refinery Products in India**, Management Science Sang M. Lee, Laurence J. Moore, Bernard W. Taylor, 1990 **Decision Sciences** Paul R. Kleindorfer, Howard Kunreuther, Paul J. H. Schoemaker, 1993-08-27 The long awaited textbook on the developing field of decision sciences This book compares different types of decision making and emphasises the link between problem finding and problem solving *Project Set Strategies* F.G.J. Derkinderen, R.L. Crum, 2012-12-06 Project Set Strategies focuses on an issue of vital concern to corporate managers the development and implementation of strategy Regrettably this topic has received too little attention in the literature of finance and has been treated in completely in the management journals In fact not everyone recognizes that it falls within the sphere of finance However since the important issues discussed in this book strategically shape the destiny of the company and can seal its fate long before the point is reached where conventional finance considerations come into play it is essential that this recognition be acknowledged From the management point of

view it has long been realized that strategic elements play a crucial role in the continued well being of the firm. Nevertheless this truth is overlooked to some extent with most management techniques since there is insufficient typification often leading to unjustified generalizations and inadequate attention to the requirements of the specific situation. Also these management techniques are not grounded upon the long established financial economic theories of valuations and thus can lead to misdirected guidance. Since the two academic disciplines of management and finance have much insight to offer each other this book represents an effort to link the strategic management area to a theoretically sound and usable financial economic foundation. In this way the probability of errors of omission or unjustified generalizations is decreased and help is offered for ascertaining more relevant goal directed recommendations.

Decision Models in Academic Administration Albert C. Heinlein, 1974

Using Performance Information to Facilitate Decisionmaking in Transportation Logistics James Shuler, 2009-09-08 This book assesses whether and to what extent senior logistics executives use performance information when making logistics related decisions. The research examines the performance management and measurement systems and processes within three major government organizations, determines what conditions if any affect logistics processes and how the organizations measure them and explores whether senior officials use this information in their decisionmaking. Case studies were conducted on the United States Department of Defense (DOD), the United States Postal Service (USPS) and the United States Department of Energy (DOE). Based on 12 critical practices that the United States General Accounting Office has identified for federal agencies to use in assessing compliance with the Government Performance and Results Act of 1993 (GPRA), 28 evaluation factors were used to assess the use of performance information at four logistical levels within each agency.

Portfolio Selection Using Multi-Objective Optimisation Saurabh Agarwal, 2017-08-21 This book explores the risk return paradox in portfolio selection by incorporating multi objective criteria. Empirical research is presented on the development of alternate portfolio models and their relative performance in the risk return framework to provide solutions to multi objective optimization. Next to outlining techniques for undertaking individual investor's profiling and portfolio programming, it also offers a new and practical approach for multi objective portfolio optimization. This book will be of interest to Foreign Institutional Investors (FIIs), Mutual Funds investors and researchers and students in the field.

Technological Capabilities and Export Success in Asia Dieter Ernst, Tom Ganiatsos, Lynn Mytelka, 2003-09-02 What accounts for export success? A team of international contributors show that learning and capability formation are critical to sustain competitiveness. Through a series of case studies of firms in the textile and garment and electronics industries of five Asian economies (Korea, Taiwan, Thailand, Indonesia and Vietnam), *Technological Capabilities and Export Success in Asia* demonstrates that cheap labour combined with currency devaluation is no longer sufficient for export success.

Interactive Multiobjective Decision Making Under Uncertainty Hitoshi Yano, 2017-02-03 Recently many books on multiobjective programming have been published. However, only a few books have

been published in which multiobjective programming under the randomness and the fuzziness are investigated On the other hand several books on multilevel programming have been published in which multiple decision makers are involved in hierarchical decision situations In this book we introduce the latest advances in the field of multiobjective programming and multilevel programming under uncertainty The reader can immediately use proposed methods to solve multiobjective programming and multilevel programming which are based on linear programming or convex programming technique Organization of each chapter is summarized as follows In Chapter 2 multiobjective programming problems with random variables are formulated and the corresponding interactive algorithms are developed to obtain a satisfactory solution in which the fuzziness of human's subjective judgment for permission levels are considered In Chapter 3 multiobjective programming problems with fuzzy random variables are formulated and the corresponding interactive algorithms are developed to obtain a satisfactory solution in which not only the uncertainty of fuzzy random variables but also the fuzziness of human's subjective judgment for permission levels are considered In Chapter 4 multiobjective multilevel programming is discussed and the interactive algorithms are developed to obtain a satisfactory solution in which the hierarchical decision structure of multiple decision makers is reflected In Chapter 5 two kinds of farm planning problems are solved by applying the proposed method in which cost coefficients of crops are expressed by random variables *Applications in*
