Timber traceability - A management tool for governments Food and Agriculture Organization of the United Nations,World Resources Institute,2022-06-20 There are growing demands for countries to develop national timber traceability systems These demands range from a country s own needs to track timber and collect associated revenues consistently to international demands for due diligence regarding the legality of the timber for imports and in some cases where a country has entered into a Voluntary Partnership Agreement VPA with the EU In response many countries have made considerable efforts to develop national systems which track timber flow from producer through processing to the point of sale and there are different approaches and tools available for doing this This report aims to document lessons and best practices in the planning of government led timber traceability systems in Latin America to provide a reference for government officials in other countries who are tasked with developing and implementing similar systems It also seeks to help other audiences recognize that traceability is global trend and is becoming a new norm for conducting business and trade in international wood markets The report focuses on experiences in Latin America where governments have proactively implemented traceability systems and demonstrated a relatively high capacity in doing so leveraging technologies and equipment to respond to the unique needs of their countries As many of these of systems are modular successful and relevant elements can easily be transferred from one context to another and adapted to suit the needs of those tasked with designing similar systems

Software Configuration Management Using Vesta Clark Allan Heydon,Roy Levin,Timothy P. Mann,Yuan Yu,2010-06-07 The core technologies underlying software configuration management have changed little in more than two decades Development organizations struggle to manage ever larger software systems with tools that were never designed to handle them Their development processes are warped by the inadequacies of their building and version management tools Developers must take time from writing and debugging code to cope with the operational problems thrust upon them by their build system s inadequate support of large scale concurrent development Vesta a novel system for large scale software configuration management offers a better solution Through a unique integration of building and version management facilities Vesta constructs software of any size repeatably incrementally and consistently Since modern software development occurs worldwide Vesta supports concurrent multi site distributed development Vesta s core facilities are methodologically neutral allowing development organizations a wide range of flexibility in the way they arrange their code repositories and structure the building of system components In short Vesta advances the state of the art in configuration management
