Energy Security in Japan Vlado Vivoda, 2016-04-29 For a country already uneasy about energy security the 2011 earthquake and tsunami which caused a nuclear catastrophe at the Fukushima nuclear power plant turned pre-existing Japanese concern about the availability of energy into outright anxiety The subsequent closure of many nuclear reactors meant Japan needed to replace lost power quickly and so had no choice but to secure additional fossil fuels undermining Japanese diversification policy and increasing global and regional competition for energy This switch has been at a cost to the already weak Japanese economy whilst the increase in fossil fuel consumption has caused a significant increase in greenhouse gas emissions In this book Vlado Vivoda examines the drastically changed environment following the disaster in order to analyse Japan's energy security challenges and evaluate Tokyo's energy policy options Looking at how the disaster exacerbated Japan's existing energy security challenges Vivoda considers the best policy options for Japan to enhance national energy security in the future exploring the main impediments to change and how they might be overcome

Race for the Exits Leonard J. Schoppa, 2011-07-15 Contrary to all expectations Japan s long term recession has provoked no sustained political movement to replace the nation s malfunctioning economic structure The country s basic social contract has so far proved resistant to reform even in the face of persistently adverse conditions In *Race for the Exits* Leonard J Schoppa explains why it has endured and how long it can last The postwar Japanese system of convoy capitalism traded lifetime employment for male workers against government support for industry and the private female provision of care for children and the elderly Two social groups bore a particularly heavy burden in providing for the social protection of the weak and dependent large firms which committed to keeping their core workforce on the payroll even in slow times and women who stayed home to care for their homes and families Using the exit voice framework made famous by Albert Hirschman Schoppa argues that both groups have chosen exit rather than voice depriving the political process of the energy needed to propel necessary reforms in the system Instead of fighting for reform firms slowly shift jobs overseas and many women abandon hopes of accommodating both family and career Over time however these trends have placed growing economic and demographic pressures on the social contract As industries reduce their domestic operations the Japanese economy is further diminished Japan has also experienced a baby bust as women opt out of motherhood Schoppa suggests that a radical break with the Japanese social contract of the past is becoming inevitable as the system slowly and quietly unravels

Social Inequality in Post-Growth Japan David Chiavacci, Carola Hommerich, 2016-09-13 In recent decades Japan has changed from a strongly growing economically successful nation regarded as prime example of social equality and inclusion to a nation with a stagnating economy a shrinking population and a very high proportion of elderly people Within this new forms of inequality are emerging and deepening and a new model of Japan as gap society kakusa shakai has become common sense These new forms of inequality are complex are caused in different ways by a variety of factors and require

deep seated reforms in order to remedy them This book provides a comprehensive overview of inequality in contemporary Japan It examines inequality in labour and employment in welfare and family in education and social mobility in the urban rural divide and concerning immigration ethnic minorities and gender The book also considers the widespread anxiety effect of the fear of inequality and discusses how far these developments in Japan represent a new form of social problem for the wider world *Widows of Japan* Debora Aoki,2010 The author examines widowhood in Japanese society through an anthropological lens It discusses the history of the Japanese widow as compared her to her Chinese and Korean counterparts Gender roles the government s role particularly in respect to war widows religion and the changing face of widowhood today are also considered The Japanese City Pradyumna P. Karan,Kristin Stapleton,2014-10-17 Japan is one of the most crowded countries on earth with three fourths of its population now living in cities Tokyo is easily the most populous city on the planet And yet though closely packed its citizens dwell together in relative peace In America inner city violence often attributed in part to overcrowding is frequently emphasized as one of the great social problems of the day What might we learn from Japan s situation that could be applied to our own as we approach the twenty first century In this collection an interdisciplinary group of international scholars seek to understand and explain the process and characteristics shaping the modern Japanese city With frequent comparisons to the American city they consider such topics as urban landscapes the quality of life in the suburbs spatial mixing of social classes in the city land use planning and control environmental pollution and images of the city in Japanese literature The only book on the subject *The Japanese City* surveys the important literature and highlights the current issues in urban studies The numerous photographs maps tables and graphs combined with the high quality of the contributions offer a comprehensive look at the contemporary Japanese city Contributors William Burton David L Callies Roman Cybriwsky Kuniko Fujita Theodore J Gilman Richard Child Hill P P Karan Robert Kidder Cotton Mather and Kohei Okamoto **Energy Transitions in Japan and China** Tai Wei Lim,2016-11-23 This volume focuses on the topic of energy transitions in the coal mining industries of China and Japan by adopting a Sino Japanese comparative approach in area studies to examine the experiences between the two major East Asian economies In China rapid industrialization led to dramatic growth in energy demand and much of this energy demand was fueled by affordable coal energy With growing social concerns about the environment and an increasingly vocal middle class in contemporary China the authorities and state owned enterprises are studying the use of coal fuels for its future development In Japan coal was also an affordable main source of energy for Japan s early post war heavy industrialization until it was gradually replaced by oil in the 1960s The oil shocks of the 1970s compelled Japan to look for cleaner and cheaper fuels including nuclear power In these energy transitions from coal to oil and then onto non fossil fuels the story of coal power in both countries is highlighted in this publication as a comparative study This volume is a crucial contribution to the discussion of China s energy reforms and required reading for scholars of climate change and society **Hard Times in the Hometown** Martin

Dusinberre, 2012-02-29 *Hard Times in the Hometown* tells the story of Kaminoseki a small town on Japan's Inland Sea. Once one of the most prosperous ports in the country, Kaminoseki fell into profound economic decline following Japan's reengagement with the West in the late nineteenth century. Using a recently discovered archive and oral histories collected during his years of research in Kaminoseki, Martin Dusinberre reconstructs the lives of households and townspeople as they tried to make sense of their changing place in the world. In challenging the familiar story of modern Japanese growth, Dusinberre provides important new insights into how ordinary people shaped the development of the modern state. Chapters describe the role of local revolutionaries in the Meiji Restoration of 1868, the ways townspeople grasped opportunities to work overseas in the late nineteenth century, and the impact this pan-Pacific diaspora community had on Kaminoseki during the prewar decades. These histories amplify Dusinberre's analysis of postwar rural decline, a phenomenon found not only in Japan but throughout the industrialized Western world. His account comes to a climax when in the 1980s the town's councillors request the construction of a nuclear power station, unleashing a storm of protests from within the community. This ongoing nuclear dispute has particular resonance in the wake of the 2011 Fukushima crisis. *Hard Times in the Hometown* gives voice to personal histories otherwise lost in abandoned archives. By bringing to life the everyday landscape of Kaminoseki, this work offers readers a compelling story through which to better understand not only nineteenth and twentieth century Japan but also modern transformations more generally.

Carbon Technocracy Victor Seow, 2023-05-10

A forceful reckoning with the relationship between energy and power through the history of what was once East Asia's largest coal mine. The coal mining town of Fushun in China's Northeast is home to a monstrous open pit. First excavated in the early twentieth century, this pit grew like a widening maw over the ensuing decades as various Chinese and Japanese states endeavored to unearth Fushun's purportedly inexhaustible carbon resources. Today the depleted mine that remains is a wondrous and terrifying monument to fantasies of a fossil-fueled future and the technologies mobilized in attempts to turn those developmentalist dreams into reality. In *Carbon Technocracy*, Victor Seow uses the remarkable story of the Fushun colliery to chart how the fossil fuel economy emerged in tandem with the rise of the modern technocratic state. Taking coal as an essential feedstock of national wealth and power, Chinese and Japanese bureaucrats, engineers, and industrialists deployed new technologies like open pit mining and hydraulic stowage in pursuit of intensive energy extraction. But as much as these mine operators idealized the might of fossil-fuel-driven machines, their extractive efforts nevertheless relied heavily on the human labor that those devices were expected to displace. Under the carbon energy regime, countless workers here and elsewhere would be subjected to invasive techniques of labor control, ever-escalating output targets, and the dangers of an increasingly exploited earth. Although Fushun is no longer the coal capital it once was, the pattern of aggressive fossil-fueled development that led to its ascent endures. As we confront a planetary crisis precipitated by our extravagant consumption of carbon, it holds urgent lessons. This is a groundbreaking exploration of how the mutual production of energy and power came

to define industrial modernity and the wider world that carbon made
