Credit Engineering for Bankers Morton Glantz, Johnathan Mun, 2010-11-25 More efficient credit portfolio engineering can increase the decision making power of bankers and boost the market value of their banks. By implementing robust risk management procedures, bankers can develop comprehensive views of obligors by integrating fundamental and market data into a portfolio framework that treats all instruments similarly. Banks that can implement strategies for uncovering credit risk investments with the highest return per unit of risk can confidently build their businesses. As readers acquire new abilities to calculate risks and evaluate portfolios, they learn how credit risk strategies and policies can affect and be affected by credit ratings and global exposure tracking systems. The result is a book that facilitates the discipline of market oriented portfolio management in the face of unending changes in the financial industry. Concentrates on the practical implementation of credit engineering strategies and tools. Demonstrates how bankers can use portfolio analytics to increase their insights about different groups of obligors.
