Baligar, Charles Allan Jones, 2010-10-19 By the year 2050 the world's population is expected to reach nine billion To feed and sustain this projected population world food production must increase by at least 50 percent on much of the same land that we farm today To meet this staggering challenge scientists must develop the technology required to achieve an evergreen revolution one

Iron in Soils and Clay Minerals J.W. Stucki, B.A. Goodman, U. Schwertmann, 2012-12-06 Probably more than any other element iron markedly influences the chemical and physical properties of soils and sediments in the earth Considering its transition metal status with potential variation in electronic configuration ionic radius and magnetic moment combined with its abundance and relatively large mass little wonder that one sees its unique influence on every hand Presentations at the NATO Advanced Study Institute NATO AS on Iron in Soils and Clay Minerals reviewed and discussed the occurrence behavior and properties of Fe bearing minerals found in soils and in the clay mineral groups kaolinite smectite and mica Also discussed at the NATO AS were the basic chemical properties of Fe methods for separating and identifying Fe in minerals and the role of Fe minerals in weathering and other soil forming processes The present publication is the reviewed and edited proceedings of that Advanced Study Institute The sequence of chapters follows the general pattern beginning with introductory chapters which overview the general occurrence of Fe in the earth and its chemistry both generally and in mineral environments followed by identification and characterization methods for Fe and Fe phases in minerals The properties and behavior of Fe oxides Fe bearing clay minerals and other Fe minerals in soils are then described and the text ends with a summary of the role of Fe in soil forming processes A Table of Contents and subject index are provided to assist the reader in finding specific topics within the text

Crops as Enhancers of Nutrient Use R Duncan, 2012-12-02 Crops as Enhancers of Nutrient Use examines the various plant and soil factors that contribute to nutrient use efficiency of plants It attempts to address policies regarding Low Input Sustainable Agriculture LISA conservation oriented cropping systems and reductions in environmental contaminants It also presents longer term remedies to some of the inherent problems of high volume applications of expensive fertilizer nutrients This book emphasizes plant soil interaction particularly nutritional interactions involving rhizosphere microbes and stress on the root system Stress factors include moisture and low and high pH The book also covers the genetic and physiological response of plant to nutrients at the cellular level on a whole plant basis and when subjected to stress This book will contribute to the development of a more cost effective and judicious nutrient usage of major crops

Plant Nutrition - Physiology and Applications M.L. Van Beusichem, 2012-12-06 Exactly 35 years after the first Colloquium was held the Eleventh International Plant Nutrition Colloquium took place from 30 July to 4 August 1989 in Wageningen The Netherlands Although impressive progress has been made during the past decades in our understanding of the mechanisms of uptake distribution and assimilation of nutrients in relation to crop yield and quality there are still significant gaps in our insight into many fundamental aspects of plant mineral nutrition and related metabolic processes In spite of improved knowledge of nutrient requirements of crops and improved fertilizer application strategies the world population remains to be burdened with an enormous shortage of plant products for food timber fuel shelter and other purposes The main challenge facing the plant nutrition research community is to at least alleviate the increasing world wide need for applying scientific knowledge to practical problems in agriculture horticulture and forestry It is therefore felt by many scientists that the Plant Nutrition Colloquia which are intended to bring together scientists and to integrate knowledge and approaches acquired in plant physiology biochemis try soil science agronomy and related disciplines have indeed made a significant contribution to the advancement of our knowledge and understanding in this vital and interdisciplinary field of agrobiolgy About 260 scientists from 40 nations attended the Colloquium in Wageningen

The Ecology of Tropical Food Crops M. J. T. Norman, C. J. Pearson, P. G. E. Searle, 1995-05-18 Retaining the successful formula of the first edition while placing additional

emphasis on tropical environmental conservation this new updated edition considers the response of tropical food crops to environmental factors such as climate soil and farming system *Inorganic Plant Nutrition* A. Läuchli, R.L.

Bieleski, 2012-12-06 The first book bearing the title of this volume *Inorganic Plant Nutrition* was written by D R HOAGLAND of the University of California at Berkeley As indicated by its extended title *Lectures on the Inorganic Nutrition of Plants* it is a collection of lectures the JOHN M PRATHER lectures which he was invited in 1942 to give at Harvard University and presented there between April 10 and 23 of that year 41 years before the publication of the present volume They were not originally intended for publication but fortunately HOAGLAND was persuaded to publish them the book appeared in 1944 It might at first blush seem inappropriate to draw comparisons between a book embodying a set of lectures by a single author and an encyclopedic volume with no less than 37 contributors But HOAGLAND S book was a comprehensive account of the state of this science in his time as the present volume is for ours It was then still possible for one person at least for a person of HOAGLAND S intellectual breadth and catholicity of interests to encompass many major areas of the entire field from the soil substrate to the metabolic roles of nitrogen potassium and other nutrients and from basic scientific topics to the application of plant nutritional research in solving problems encountered in the field
