## Low Dimensional Topology Proc:

*Low Dimensional Topology* Hanna Nencka, 1999 The book has two main parts The first is devoted to the Poincare conjecture characterizations of PL manifolds covering quadratic forms of links and to categories in low dimensional topology that appear in connection with conformal and quantum field theory *Topics in low-dimensional topology : in honor of Steve Armentrout : proceedings of the Conference on Low-Dimensional Topology* Augustin Banyaga, 1999 *Recent Advances in Group Theory and Low-dimensional Topology* Jens L. Mennicke, Jung Rae Cho, 2003 Topics In Low Dimensional Topology: In Honor Of Steve Armentrout - Proceedings Of The Conference On Low-dimensional Topology Augustin Banyaga, H Movahedi-lankarani, Robert Wells, 1999-10-15 Recent success with the four dimensional Poincar conjecture has revived interest in low dimensional topology especially the three dimensional Poincar conjecture and other aspects of the problems of classifying three dimensional manifolds These problems have a driving force and have generated a great body of research as well as insight The main topics treated in this book include a paper by V Poenaru on the Poincar conjecture and its ramifications giving an insight into the herculean work of the author on the subject Steve Armentrout s paper on Bing s dogbone space belongs to the topics in three dimensional topology motivated by the Poincar conjecture S Singh gives a nice synthesis of Armentrout s work Also included in the volume are shorter original papers dealing with somewhat different aspects of geometry and dedicated to Armentrout by his colleagues Augustin Banyaga and Jean Pierre Ezin David Hurtubise Hossein Movahedi Lankarani and Robert Wells *Low-Dimensional Topology* R. Brown, T. L. Thickstun, 1982-05-20 This volume consists of the proceedings of a conference held at the University College of North Wales Bangor in July of 1979 It assembles research papers which reflect diverse currents in low dimensional topology The topology of 3 manifolds hyperbolic geometry and knot theory emerge as major themes The inclusion of surveys of work in these areas should make the book very useful to students as well as researchers Global Differential Geometry Christian Bär, Joachim Lohkamp, Matthias Schwarz, 2011-12-18 This volume contains a collection of well written surveys provided by experts in Global Differential Geometry to give an overview over recent developments in Riemannian Geometry Geometric Analysis and Symplectic Geometry The papers are written for graduate students and researchers with a general interest in geometry who want to get acquainted with the current trends in these central fields of modern mathematics , **Spaces of Homotopy Self-Equivalences - A Survey** John W. Rutter, 2006-11-14 This survey covers groups of homotopy self equivalence classes of topological spaces and the homotopy type of spaces of homotopy self equivalences For manifolds the full group of equivalences and the mapping class group are compared as are the corresponding spaces Included are methods of calculation numerous calculations finite generation results Whitehead torsion and other areas Some 330 references are given The book assumes familiarity with cell complexes homology and homotopy Graduate students and established researchers can use it for learning for reference and to determine the current state of knowledge *Low-Dimensional Topology* Thomas

Lusk Thickstun, Ronald Brown, Savilian Professor of Geometry N J Hitchin, 2014-05-14 This volume consists of the proceedings of a conference held at the University College of North Wales Bangor in July of 1979 It assembles research papers which reflect diverse currents in low dimensional topology The topology of 3 manifolds hyperbolic geometry and knot theory emerge as major themes The inclusion of surveys of work in these areas should make the book very useful to students as well as researchers

**Problems on Mapping Class Groups and Related Topics** Benson Farb, 2006-09-12 The appearance of mapping class groups in mathematics is ubiquitous The book presents 23 papers containing problems about mapping class groups the moduli space of Riemann surfaces Teichmüller geometry and related areas Each paper focusses completely on open problems and directions The problems range in scope from specific computations to broad programs The goal is to have a rich source of problems which have been formulated explicitly and accessibly The book is divided into four parts Part I contains problems on the combinatorial and cohomological group theoretic aspects of mapping class groups and the way in which these relate to problems in geometry and topology Part II concentrates on connections with classification problems in 3 manifold theory the theory of symplectic 4 manifolds and algebraic geometry A wide variety of problems from understanding billiard trajectories to the classification of Kleinian groups can be reduced to differential and synthetic geometry problems about moduli space Such problems and connections are discussed in Part III Mapping class groups are related both concretely and philosophically to a number of other groups such as braid groups lattices in semisimple Lie groups and automorphism groups of free groups Part IV concentrates on problems surrounding these relationships This book should be of interest to anyone studying geometry topology algebraic geometry or infinite groups It is meant to provide inspiration for everyone from graduate students to senior researchers

**Quantum Invariants of Knots and 3-Manifolds** Vladimir G. Turaev, 2016-07-11 Due to the strong appeal and wide use of this monograph it is now available in its third revised edition The monograph gives a systematic treatment of 3 dimensional topological quantum field theories TQFTs based on the work of the author with N Reshetikhin and O Viro This subject was inspired by the discovery of the Jones polynomial of knots and the Witten Chern Simons field theory On the algebraic side the study of 3 dimensional TQFTs has been influenced by the theory of braided categories and the theory of quantum groups The book is divided into three parts Part I presents a construction of 3 dimensional TQFTs and 2 dimensional modular functors from so called modular categories This gives a vast class of knot invariants and 3 manifold invariants as well as a class of linear representations of the mapping class groups of surfaces In Part II the technique of 6j symbols is used to define state sum invariants of 3 manifolds Their relation to the TQFTs constructed in Part I is established via the theory of shadows Part III provides constructions of modular categories based on quantum groups and skein modules of tangles in the 3 space This fundamental contribution to topological quantum field theory is accessible to graduate students in mathematics and physics with knowledge of basic algebra and topology It is an indispensable source for everyone who wishes to enter the forefront of this fascinating area at

the borderline of mathematics and physics Contents Invariants of graphs in Euclidean 3 space and of closed 3 manifolds Foundations of topological quantum field theory Three dimensional topological quantum field theory Two dimensional modular functors 6j symbols Simplicial state sums on 3 manifolds Shadows of manifolds and state sums on shadows Constructions of modular categories

**4-manifolds** Selman Akbulut, 2016 This book presents the topology of smooth 4 manifolds in an intuitive self contained way developed over a number of years by Professor Akbulut The text is aimed at graduate students and focuses on the teaching and learning of the subject giving a direct approach to constructions and theorems which are supplemented by exercises to help the reader work through the details not covered in the proofs The book contains a hundred colour illustrations to demonstrate the ideas rather than providing long winded and potentially unclear explanations Key results have been selected that relate to the material discussed and the author has provided examples of how to analyse them with the techniques developed in earlier chapters *Collected Papers of John Milnor* John Willard Milnor, 1994

**Moduli of Curves and Abelian Varieties** Carel Faber, Eduard Looijenga, 2012-12-06 The present volume with contributions of R Dijkgraaf C Faber G van der Geer R Rain E Looijenga and F Oort originates from the Dutch Intercity Seminar on Moduli year 1995-96 Some of the articles here were discussed in preliminary form in the seminar others are completely new Two introductory papers on moduli of abelian varieties and on moduli of curves accompany the articles Topics include a stratification of a moduli space of abelian varieties in positive characteristic and the calculation of the classes of the strata tautological classes for moduli of abelian varieties as well as for moduli of curves correspondences between moduli spaces of curves locally symmetric families of curves and jacobians and the role of symmetric product spaces in quantum field theory string theory and matrix theory This Intercity Seminar is part of the long term project Algebraic curves and Riemann surfaces geometry arithmetic and applications sponsored by the Netherlands Organization for Scientific Research NWO that has been running since 1994 Its ancestry can be traced back to joint activities in the seventies if not earlier which as of 1980 had evolved into active biweekly research seminars These have been a focal point of Dutch algebraic geometry and singularity theory since We are grateful to NWO for its support for the project C F thanks the Max Planck Institut für Mathematik Bonn for support during the final stages of the preparation of this volume Geometric Folding Algorithms Erik D. Demaine, Joseph O'Rourke, 2007-07-16 Did you know that any straight line drawing on paper can be folded so that the complete drawing can be cut out with one straight scissors cut That there is a planar linkage that can trace out any algebraic curve or even sign your name Or that a Latin cross unfolding of a cube can be refolded to 23 different convex polyhedra Over the past decade there has been a surge of interest in such problems with applications ranging from robotics to protein folding With an emphasis on algorithmic or computational aspects this treatment gives hundreds of results and over 60 unsolved open problems to inspire further research The authors cover one dimensional 1D objects linkages 2D objects paper and 3D objects polyhedra Aimed at advanced undergraduate and graduate students in
