Human Evolution Brian Regal,2004-11-23 A fascinating and wide ranging look at the controversies surrounding the search for the origins of the human species Written for those new to the subject Human Evolution A Guide to the Debates

presents the remarkable history of our understanding of human origins as it developed from the 1800s to the present. Most works on this topic focus narrowly on one individual theory or debate. In contrast, *Human Evolution* draws from a wide range of sources to offer a fully rounded portrait of the entire field. The chapters of the book follow a basic chronological order covering the issues, personalities, and discoveries that are central to the questions and controversies surrounding human evolution. The coverage draws from a wide range of associated topics and examines not only controversies of a religious nature but also those that have little to do with religion, allowing readers to weigh the information and come to their own conclusions and even begin their own debates.

The Truth about Human Origins Brad Harrub, Bert Thompson, 2003

Ever since Charles Darwin first published *The Origin of Species* on November 24, 1859, the subject of origins has been one of the most controversial topics around. Sadly, it also is a subject that is fraught with erroneous theories and concepts. Most students today are taught that organic evolution is not a theory but a fact that all reputable scientists accept. Disclaimers from the evolutionary community notwithstanding, such a claim is quite simply wrong. We believe it is time for someone to offer what renowned news commentator Paul Harvey would call the rest of the story. That is what *The Truth About Human Origins* does. It tells the rest of the story as it discusses the scientific facts about mankind's beginning. For example, it investigates the record of the rocks as that record relates to human evolution. It demonstrates how evolutionary theory is unable to explain things like the origin of gender and sexual reproduction, the origin of language and communication, the origin of the brain, the mind, and human consciousness, and the origin of skin colors and blood types. It also examines in an in-depth fashion the so-called molecular evidence of human evolution.

Unthinking Eurocentrism Ella Shohat, Robert Stam, 2013-09-27

This excellent book corrects eurocentric criticism from media studies in the past by examining Hollywood movie genres such as the western and the musical from a multicultural perspective.

The First Human Ann Gibbons, 2007-04-10

In this dynamic account, award-winning science writer Ann Gibbons chronicles an extraordinary quest to answer the most primal of questions: When and where was the dawn of humankind? Following four intensely competitive international teams of scientists in a heated race to find the missing link, the fossil of the earliest human ancestor, Gibbons ventures to Africa where she encounters a fascinating array of fossil hunters: Tim White, the irreverent Californian who discovered the partial skeleton of a primate that lived 4.4 million years ago in Ethiopia; French paleontologist Michel Brunet, who uncovers a skull in Chad that could date the beginnings of humankind to seven million years ago; and two other groups: one led by zoologist Meave Leakey, the other by British geologist Martin Pickford and his French paleontologist partner Brigitte Senut, who enter the race with landmark discoveries of their own. Through scrupulous research and vivid first-person reporting, *The First Human* reveals the perils and the promises of fossil hunting on a grand competitive scale.
