Chudnovsky, Gregory V. Chudnovsky, Melvyn B. Nathanson, 1996-09-19 This volume is dedicated to Harvey Cohn Distinguished Professor Emeritus of Mathematics at City College CUNY Harvey was one of the organizers of the New York Number Theory Seminar and was deeply involved in all aspects of the Seminar from its first meeting in January 1982 until his retirement in December 1995 We wish him good health and continued happiness and success in mathematics The papers in this volume are revised and expanded versions of lectures delivered in the New York Number Theory Seminar The Seminar meets weekly at the Graduate School and University Center of the City University of New York CUNY In addition some of the papers in this book were presented at a conference on Combinatorial Number Theory that the New York Number Theory Seminar organized at Lehman College CUNY Here is a short description of the papers in this volume The paper of R T Bumby focuses on elementary fast algorithms in sums of two and four squares The actual talk had been accompanied by dazzling computer demonstrations The detailed review of H Cohn describes the construction of modular equations as the basis of studies of modular forms in the one dimensional and Hilbert cases Combinatorial Number Theory and Additive Group Theory Alfred Geroldinger, Imre Ruzsa, 2009-04-15 Additive combinatorics is a relatively recent term coined to comprehend the developments of the more classical additive number theory mainly focussed on problems related to the addition of integers

Some classical problems like the Waring problem on the sum of k th powers or the Goldbach conjecture are genuine examples of the original questions addressed in the area. One of the features of contemporary additive combinatorics is the interplay of a great variety of mathematical techniques including combinatorics, harmonic analysis, convex geometry, graph theory, probability theory, algebraic geometry, or ergodic theory. This book gathers the contributions of many of the leading researchers in the area and is divided into three parts. The two first parts correspond to the material of the main courses delivered: Additive combinatorics and non-unique factorizations by Alfred Geroldinger and Sumsets and structure by Imre Z. Ruzsa. The third part collects the notes of most of the seminars which accompanied the main courses and which cover a reasonably large part of the methods, techniques, and problems of contemporary additive combinatorics.

Number Theory for the Millennium III Bruce Berndt, M.A. Bennett, N. Boston, H.G. Diamond, A.J. Hildebrand, W. Phillips, 2023-03-17. Building on the tradition of an outstanding series of conferences at the University of Illinois at Urbana-Champaign, the organizers attracted an international group of scholars to open the new Millennium with a conference that reviewed the current state of number theory research and pointed to future directions in the field. The conference was the largest general number theory conference in recent history, featuring a total of 159 talks, with the plenary lectures given by George Andrews, Jean Bourgain, Kevin Ford, Ron Graham, Andrew Granville, Roger Heath-Brown, Christopher Hooley, Winnie Li, Kumar Murty, Mel Nathanson, Ken Ono, Carl Pomerance, Bjorn Poonen, Wolfgang Schmidt, Chris Skinner, K. Soundararajan, Robert Tijdeman, Robert Vaughan, and Hugh Williams. The Proceedings Volumes of the conference review some of the major number theory achievements of this century and to chart some of the directions in which the subject will be heading during the new century. These volumes will serve as a useful reference to researchers in the area and an introduction to topics of current interest in number theory for a general audience in mathematics.

Combinatorial and Additive Number Theory V Melvyn B. Nathanson, 2023-01-01. This proceedings volume, the fifth in a series from the Combinatorial and Additive Number Theory (CANT) conferences, is based on talks from the 19th annual workshop held online due to the COVID-19 pandemic. Organized every year since 2003 by the New York Number Theory Seminar at the CUNY Graduate Center, the workshops survey the state of the art on open problems in combinatorial and additive number theory and related parts of mathematics. The CANT 2021 meeting featured over a hundred speakers from North and South America, Europe, Asia, Australia, and New Zealand and was the largest CANT conference in terms of the number of both lectures and participants. These proceedings contain peer-reviewed and edited papers on current topics in number theory. Topics featured in this volume include sumsets, minimal bases, Sidon sets, analytic and prime number theory, combinatorial and discrete geometry, numerical semigroups, and a survey of expansion, divisibility, and parity. This selection of articles will be of relevance to both researchers and graduate students interested in current progress in number theory.

Additive Combinatorics Terence Tao,Van H. Vu,2006-09-14 Additive combinatorics is the theory of counting additive structures in sets This theory has seen exciting developments and dramatic changes in direction in recent years thanks to its connections with areas such as number theory ergodic theory and graph theory This graduate level 2006 text will allow students and researchers easy entry into this fascinating field Here the authors bring together in a self contained and systematic manner the many different tools and ideas that are used in the modern theory presenting them in an accessible coherent and intuitively clear manner and providing immediate applications to problems in additive combinatorics The power of these tools is well demonstrated in the presentation of recent advances such as Szemerédi's theorem on arithmetic progressions the Kakeya conjecture and Erdős distance problems and the developing field of sum product estimates The text is supplemented by a large number of exercises and new results Number Theory for the Millennium III Michael A. Bennett,2002-09-05 Building on the tradition of an outstanding series of conferences at the University of Illinois at Urbana Champaign the organizers attracted an international group of scholars to open the new Millennium with a conference that reviewed the current state of number theory research and pointed to future directions in the field The conference was the largest general number theory conference in recent history featuring a total of 159 talks with the plenary lectures given by George Andrews Jean Bourgain Kevin Ford Ron Graham Andrew Granville Roger Heath Brown Christopher Hooley Winnie Li Kumar Murty Mel Nathanson Ken Ono Carl Pomerance Bjorn Poonen Wolfgang Schmidt Chris Skinner K Soundararajan Robert Tijdeman Robert Vaughan and Hugh Williams The Proceedings Volumes of the conference review some of the major number theory achievements of this century and to chart some of the directions in which the subject will be heading during the new century These volumes will serve as a useful reference to researchers in the area and an introduction to topics of current interest in number theory for a general audience in mathematics *Finite Fields: Theory and Computation* Igor Shparlinski,2013-03-09 This book is mainly devoted to some computational and algorithmic problems in finite fields such as for example polynomial factorization finding irreducible and primitive polynomials the distribution of these primitive polynomials and of primitive points on elliptic curves constructing bases of various types and new applications of finite fields

to other areas of mathematics For completeness we include two special chapters on some recent advances and applications of the theory of congruences optimal coefficients congruential pseudo random number generators modular arithmetic etc and computational number theory primality testing factoring integers computation in algebraic number theory etc The problems considered here have many applications in Computer Science Coding Theory Cryptography Numerical Methods and so on There are a few books devoted to more general questions but the results contained in this book have not till now been collected under one cover In the present work the author has attempted to point out new links among different areas of the theory of finite fields It contains many very important results which previously could be found only in widely scattered and hardly available conference proceedings and journals In particular we extensively review results which originally appeared only in Russian and are not well known to mathematicians outside the former USSR

Number Theory: Dreaming In Dreams - Proceedings Of The 5th China-japan Seminar Shigeru Kanemitsu, Takashi Aoki, Jianya Liu, 2009-11-26 This volume aims at collecting survey papers which give broad and enlightening perspectives of various aspects of number theory Kitaoka's paper is a continuation of his earlier paper published in the last proceedings and pushes the research forward Browning's paper introduces a new direction of research on analytic number theory quantitative theory of some surfaces and Bruedern et al's paper details state of the art affairs of additive number theory There are two papers on modular forms Kohnen's paper describes generalized modular forms GMF which has some applications in conformal field theory while Liu's paper is very useful for readers who want to have a quick introduction to Maass forms and some analytic number theoretic problems related to them Matsumoto et al's paper gives a very thorough survey on functional relations of root system zeta functions Hoshi Miyake's paper is a continuation of Miyake's long and fruitful research on generic polynomials and gives rise to related Diophantine problems and Jia's paper surveys some dynamical aspects of a special arithmetic function connected with the distribution of prime numbers There are two papers of collections of problems by Shparlinski on exponential and character sums and Schinzel on polynomials which will serve as an aid for finding suitable research problems Yamamura's paper is a complete bibliography on determinant expressions for a certain class number and will be useful to researchers Thus the book gives a good balance of classical and modern aspects in number theory and will be useful to researchers including enthusiastic graduate students
