Computational Molecular Dynamics: Challenges, Methods, Ideas

Peter Deuflhard, 1999 On May 21-24, 1997 the Second International Symposium on Algorithms for Macromolecular Modelling was held at the Konrad Zuse Zentrum in Berlin. The event brought together computational scientists in fields like biochemistry, biophysics, physical chemistry, or statistical physics, and numerical analysts as well as computer scientists working on the advancement of algorithms for a total of over 120 participants from 19 countries. In the course of the symposium, the speakers agreed to produce a representative volume that combines survey articles and original papers, all refereed, to give an impression of the present state of the art of Molecular Dynamics. The 29 articles of the book reflect the main topics of the Berlin meeting, which were: i) Conformational Dynamics, ii) Thermodynamic Modelling, iii) Advanced Time Stepping Algorithms, iv) Quantum Classical Simulations and Fast Force Field, and v) Fast Force Field Evaluation.

Spectral Elements for

Transport-Dominated Equations Daniele Funaro, 1997-04-17 The book deals with the numerical approximation of various PDEs using the spectral element method, with particular emphasis for elliptic equations dominated by first-order terms. It provides a simple introduction to spectral elements with additional new tools: upwind grids and preconditioners. Applications to fluid dynamics and semiconductor devices are considered, as well as in other models where transport-diffusion equations arise. The aim is to provide the reader with both introductory and more advanced material on spectral Legendre collocation methods. The book, however, does not cover all the aspects of spectral methods. Engineers, physicists, and applied mathematicians may study how to implement the collocation method and use the results to improve their computational codes.

Simulation and Computational Red Teaming for Problem Solving

Jiangjun Tang, George Leu, Hussein A. Abbass, 2019-10-18 An authoritative guide to computer simulation grounded in a multi-disciplinary approach for solving complex problems. Simulation and Computational Red Teaming for Problem Solving offers a review of computer simulation that is grounded in a multi-disciplinary approach. The authors present the theoretical foundations of simulation and modeling paradigms from the perspective of an analyst. The book provides the fundamental background information needed for designing and developing consistent and useful simulations. In addition to this basic information, the authors explore several advanced topics. The book's advanced topics demonstrate how modern artificial intelligence and computational intelligence concepts and techniques can be combined with various simulation paradigms for solving complex and critical problems. Authors examine the concept of Computational Red Teaming to reveal how the combined fundamentals and advanced techniques are used successfully for solving and testing complex real-world problems. This important book demonstrates how computer simulation and Computational Red Teaming support each other for solving complex problems. Describes the main approaches to modeling real-world phenomena and embedding these models into computer simulations. Explores how a number of advanced artificial intelligence and computational intelligence concepts are used in conjunction with the fundamental aspects of simulation. Written for researchers and students in the computational modelling and data analysis.
