Matz, 2012-12-06 This book fills a need for a technological guide in a field that has experienced an almost explosive increase in the last two decades No other book available to food scientists provides detailed coverage of the ingredients processes products and equipment of nearly every type of snack food made today Since publication of the First Edition many changes have occurred in the snack industry making necessary a thorough revision of all chapters The text illustrations and bibliographies have all been brought up to date My goal has been to provide an accurate and reasonably detailed description of every major snack processing method and product current in the United States If any reader believes I have omitted an important topic I would be glad to learn of it in the hope that there will be a Third Edition in which I can incorporate the suggested additions One of the main purposes of this volume is to provide a source for answers to problems that the technologist encounters in the course of his or her daily work Extensive bibliographies in which the emphasis is on recent publications extending into 1983 should permit the reader to resolve more complex or new questions With these bibliographies as guides the food technologist can delve as deeply as he or she wishes into specialized aspects of the subject while at the same time the reader who is interested in the broad overall picture will not be distracted by excess detail

History of Seventh-day Adventist Work with Soyfoods, Vegetarianism, Meat Alternatives, Wheat Gluten, Dietary Fiber and Peanut Butter (1863-2013) William Shurtleff, Akiko Aoyagi, 2014-01-06 The most comprehensive book on this subject ever published With 3 638 references Technological Advances in Improved and Alternative Sources of Lipids B. S. Kamel, 2012-12-06 Lipids are very important both as components of human nutrition and in applications such as the chemical cosmetics and food industries At present the world oil supply depends on conventional sources and changes in the political and economical map of the world may mean consumer demand will surpass supplies In developed nations consumer preferences due to nutrition and health factors have also created a need to produce new types of oil Many nations lack the power to purchase fats and oil due to shortages in hard currency These nations have a vast number of plants that can be

developed and used in extracting oil for home use and for sale as cash crops Also a vast amount of waste from food processing such as tomatoes peaches plums and grapes can be utilized to extract valuable amounts of usable oil Biotechnology genetic engineering enzyme technologies and new processes are all being utilized in lipids research to develop new and modified types of oil for different applications such developments include the high oleic acid sunflower and rapeseed oils The development of cocoa butter substitute is another example This highly practical book reviews the methods of improving oil characteristics from existing sources and the technology and economics of developing underutilized sources It is written for lipid chemists chemical engineers food technologists cosmetologists and nutritionists Graduate and undergraduate students will find value in the data B S K The Lipid Handbook, Second Edition Frank D. Gunstone, John L. Harwood, Fred B. Padley, 1994-07-21 A great deal of research has been carried out on this important class of compounds in the last ten years To ensure that scientists are kept up to date the editors of the First Edition of The Lipid Handbook have completely reviewed and extensively revised their highly successful original work The Lipid Handbook Second Edition is an indispensable resource for anyone working with oils fats and related substances *Chocolate, Cocoa and Confectionery: Science and Technology* Bernard Minifie, 2012-12-06 The second edition of this book achieved worldwide recognition within the chocolate and confectionery industry I was pressed to prepare the third edition to include modern developments in machinery production and packaging This has been a formidable task and has taken longer than anticipated Students still require in one book descriptions of the fundamental principles of the industry as well as an insight into modern methods Therefore parts of the previous edition describing basic technology have been retained with minor alterations where necessary With over fifty years experience in the industry and the past eighteen years working as an author lecturer and consultant I have collected a great deal of useful information Visits to trade exhibitions and to manufacturers of raw materials and machinery in many parts of the world have been very valuable Much research and reading have been necessary to prepare for teaching and lecturing at various colleges seminars and manufacturing establishments The third edition is still mainly concerned with science technology and production It is not a book of formulations which are readily available elsewhere Formulations without knowledge of principles lead to many errors and recipes are given only where examples are necessary _ Analytical methods are described only when they are not available in textbooks of which there are many on standard methods of food analysis Acknowledgments I am still indebted to many of the persons mentioned under Acknowledgments in the second edition I am especially grateful to the following **Food Additives, Second Edition Revised And Expanded**, Horticultural Reviews, Volume 5 Jules Janick, 2011-01-11 Horticultural Reviews presents state of the art reviews on topics in horticultural science and technology covering both basic and applied research Topics covered include the horticulture of fruits vegetables nut crops and ornamentals These review articles written by world authorities bridge the gap between the specialized researcher and the broader community of horticultural scientists and teachers
