K. N. Rao, A. D. Hope, 2012-12-06 Raj B. K. N. Rao Conference Director Birmingham Polytechnic Condition Monitoring and Diagnostic Engineering Management COMADEM is a relatively new field that has already made its mark in a wide range of industries But all the signs are that even more will be required of researchers in the field over the next decade for COMADEM directly addresses a whole range of issues that are likely to become increasingly important to companies as competitiveness increases along with the uncertainties resulting from rapid technological change Already for example businesses are having to scrutinize the economics of plant and machinery in greater detail than ever before reliability is becoming a crucial factor as the costs of unscheduled breakdowns rise and there is increasing pressure on companies to demonstrate and assure improved health and safety conditions especially in light of the growing number of catastrophic accidents that have occurred throughout the world Because it offers solutions to these and similar problems COMADEM is now gaining an international reputation as a problem solving user friendly and financially beneficial multi discipline with immense potential Many people at the senior management level are now convinced that COMADEM has much to offer and are wasting no time in reaping maximum benefit from the latest developments The fact that the first UK informal seminar on COMADEM COMADEM 88 proved to be a great success and had a truly international flavour reflected this growing interest in the new field Condition Monitoring and Nonlinear Frequency Analysis Based Fault Detection of Mechanical Vibration Systems Hogir Rafiq, 2023-08-26 Hogir Rafiq proposes two approaches the signal processing based condition monitoring approaches with applications to fault detection in gear systems and application of deep mathematical and system theoretical methods to fault detection The author develops the multivariate empirical mode decomposition MEMD algorithm to enhance the capability of extracting fault features and theoretical problems in nonlinear frequency analysis methods respectively The effectiveness has been demonstrated by an experimental study on a wind turbine gearbox test rig *Condition Monitoring and Diagnostic Engineering Management* Y.H.J.
