Hereford Locomotive Shed Steve Bartlett, 2017-10-30 Hereford Locomotive Shed is the first in a series of in depth studies to look closely at the changing engine allocations and operational responsibilities of motive power depots during the latter days of steam In Herefords case this was a varied mixture of main line passenger freight trip working branch line passenger station pilot duties and yard shunting Unusually the latter remained a steam preserve until months before depot closure in November 1964 Not forgotten are the depots small sub sheds which had varying responsibilities over the years as the district boundaries changed at Ledbury Leominster Ross on Wye and Craven Arms Their very different duties were inevitably a reflection of a bygone age and an all too rapidly changing future The author personally recorded the Hereford railway scene from the late 1950s until depot closure He made shed visits several times a week and at other times observed the ever changing locomotive scene from the elevated Bulmers Sidewalk behind the depots coaling stage Details carefully kept from those far off days has proved a valuable cross reference with present day research into Herefords role from official records at The National Archives Kew and other railway research sources Having spent almost forty years working in the industry the author is able to sympathetically unravel and interpret the story of this hard working mixed traffic depot Hereford is strategically located on the North West route from South Wales and the West of England to the North West as well as being an important junction for Worcester the West Midlands Branch lines to Brecon and Gloucester radiated from this Border Counties railway junction and freight trips radiated out to serve the surrounding area All of this made Hereford a fascinating rail centre and a locomotive shed worthy of its story for posterity which is meticulously recorded in this book **Shropshire Parish Registers** Shropshire Parish Register Society, 1915 *The World's First Railway System* Mark Casson, 2009-09-10

The British railway network was a monument to Victorian private enterprise Its masterpieces of civil engineering were emulated around the world But its performance was controversial praised for promoting a high density of lines it was also criticised for wasteful duplication of routes This is the first history of the British railway system written from a modern economic perspective It uses counterfactual analysis to construct an alternative network to represent the most efficient alternative rail network that could have been constructed given what was known at the time the first time this has been done It reveals how weaknesses in regulation and defects in government policy resulted in enormous inefficiency in the Victorian system that Britain lives with today British railway companies developed into powerful regional monopolies which then contested each other s territories When denied access to existing lines in rival territories they built duplicate lines instead Plans for an integrated national system sponsored by William Gladstone were blocked by Members of Parliament because of a perceived conflict with the local interests they represented Each town wanted more railways than its neighbours and so too

many lines were built The costs of these surplus lines led ultimately to higher fares and freight charges which impaired the performance of the economy The book will be the definitive source of reference for those interested in the economic history of the British railway system It makes use of a major new historical source deposited railway plans integrates transport and local history through its regional analysis of the railway system and provides a comprehensive classified bibliography
