Medium Sized Firms and Economics Growth Janez Prašnikar, 2005 The culprit for deficiencies of knowledge about medium sized companies is their frequent inclusion among small companies The authors try to find arguments for a more sensible definition of medium sized company in modern microeconomic theory theory of entrepreneurship and theory of financial markets According to the first one companies grow until they reach the minimum efficient scale On the other hand a company's size is determined by incomplete contractual relationships The second theory argues that medium sized companies have some advantages because a more manageable number of employees and closer ties between them and the entrepreneur may reduce monitoring costs In addition the employees are more willing to invest in formation of specific skills required for their post The third theory claims that due to information asymmetry medium sized firms resort predominantly to internal sources of financing depreciation retained profits while banks relationship banking are more frequently among external sources of finance than capital markets what are medium sized companies dynamic how do they grow national how a national economy to a large extent depends on the efficiency of medium sized companies and international how some medium sized companies acquire characteristics of multinational companies by means of foreign investment

Routledge Handbook of the Economics of Knowledge Cristiano Antonelli, Albert Link, 2014-12-05 The Routledge Handbook of the Economics of Knowledge provides a

comprehensive framework to integrate the advancements over the last 20 years in the analysis of technological knowledge as an economic good and in the static and dynamic characteristics of its generation process. There is a growing consensus in the field of economics that technological knowledge in particular is one of the most relevant resources of wealth yet it is one of the most difficult and complex activities to understand or even to conceptualize. The economics of knowledge is an emerging field that explores the generation, exploitation and dissemination of technological knowledge. Technological knowledge cannot any longer be regarded as a homogenous good that stems from standardized generation processes. Quite the opposite, technological knowledge appears more and more to be a basket of heterogeneous items, resources and even experiences. All of these sources which are both internal and external to the firm are complementary as is the interplay between a bottom up and top down generation processes. In this context the interactions between the public research system, private research laboratories and various networks of learning processes within and among firms play a major role in the creation of technological knowledge. In this Handbook special attention is given to the relationship among technological knowledge and both upstream scientific knowledge and related downstream resources. By addressing the antecedents and consequences of technological knowledge from both an upstream and downstream perspective, this Handbook will become an indispensable tool for scholars and practitioners aiming to master the generation and the use of technological knowledge.

AI Fairness and Beyond Chris Reed, 2024-08-08. This book proposes a regulatory system for ensuring that AI makes fair decisions. No one wants to be the subject of an unfair decision made by an AI, and fairness is so important to society that we are likely to want to regulate to demand it. But how? This book attempts to answer that question. The aim of regulation must be for an AI's decisions to match the human conception of fairness. To understand what that is, the book proposes a holistic understanding of fairness which tells us what regulation must try to achieve. However, regulation is not an abstract activity; it regulates how humans behave, and the humans in question are those who develop and use AI for decision making. Thus, the book investigates how those humans are attempting to achieve AI fairness. It finds that there is a serious mismatch between how technologists conceptualise fairness compared to other humans. How can AI regulation bridge this gap? Traditional models of regulation cannot solve this problem. Fairness is too nuanced, too contextual, and is ultimately a human emotional response. Instead, the

book proposes to place the responsibility on the AI community to explain and justify their efforts to achieve fairness basing regulatory and legal responses on how well that explanation deals with the risks that particular AI presents and whether the AI operates in accordance with the explanation in use The book concludes by examining how far this regulatory model might be useful for some of the other social problems which AI generates An original and significant contribution to the literature on AI regulation this book is a must read for those working in the areas of law regulation and technology

The British National Bibliography Arthur James Wells,2000 Arts in Health Daisy Fancourt,2017-06-22 Over the past few decades the use of the arts in health has blossomed What for many centuries was seen as a fringe activity is now being recognised as a field that has enormous potential for impacting positively on both individuals and societies However despite this surge in interest and activity there is still limited support available for people working in the field Although the number of practical training courses for artists is growing and more universities are establishing research groups most training activity occurs in either practice or research there are relatively few opportunities to gain parallel experience in both Arts in Health Designing and Researching Interventions provides a complete overview of how to go about undertaking research and practice in the field of arts in health It starts by exploring the context for arts in health interventions including the history of the use of arts in health and the theoretical and political developments that have laid the foundations for its flourishing It also considers what arts in health encompasses and the range of disciplines involved Part II examines how to design an arts in health intervention develop partnerships and find funding and considers the sensitivities around working in healthcare Part III considers the value of research for the field of arts in health and how to design and undertake a research project Finally part IV provides a fact file of arts in health research and practice showing how the arts can be applied and the benefits they can bring across a range of medical disciplines The book will be valuable for researchers practitioners healthcare professionals and those interested in learning more about the field **Positive Prospects** Campaign for Social Science,2018-04-20 Almost four in ten graduates studied one of the social sciences Where do they go to work How do their

employment and earnings compare to those who graduate from other areas What makes a difference to their employment chances Positive Prospects provides a brief description of employment after graduation for those who study a wide range of social science subjects using up to date information The report gathers evidence from many sources about longer term prospects and the backgrounds of world leaders It shows that there is variation between those graduating from different social science disciplines as there is with so called STEM science technology engineering and maths graduates Positive Prospects takes a look at the effect of graduating from different types of university while observing that this reflects a great many factors such as students backgrounds and where they live and study One clear theme is that having number and data skills either from secondary school or as part of undergraduate study is likely to give individuals of every discipline a wider range of choices about work meaning they are likely to earn more Needless to say number and data skills are not the only things that matter nor do all social science students need the same skill level But the Campaign for Social Science has long believed that we need more people with conceptual social science skills and knowledge combined with some number and data skills Positive Prospects shows that this combination has clear benefits The Campaign has also prepared summaries aimed specifically at undergraduates schools and school students
