Number Concepts And Relationships:

Children's Counting and Concepts of Number Karen C. Fuson, 2012-12-06 For some time now the study of cognitive development has been far and away the most active discipline within developmental psychology. Although there would be much disagreement as to the exact proportion of papers published in developmental journals that could be considered cognitive, 50% seems like a conservative estimate. Hence a series of scholarly books devoted to work in cognitive development is especially appropriate at this time. The Springer Series in Cognitive Development contains two basic types of books: namely edited collections of original chapters by several authors and original volumes written by one author or a small group of authors. The flagship for the Springer Series is a serial publication of the advances type carrying the subtitle *Progress in Cognitive Development Research*. Volumes in the Progress sequence are strongly thematic in that each is limited to some well defined domain of cognitive developmental research, e.g. logical and mathematical development, semantic development. All Progress volumes are edited collections. Editors of such books, upon consultation with the Series Editor, may elect to have their works published either as contributions to the Progress sequence or as separate volumes. All books written by one author or a small group of authors will be published as separate volumes. Within the series is being used the selection of a fairly broad definition of cognitive development. Titles of books for this series: **Medical Informatics in a United and**

A Practical Course in Terminology Processing Juan C. Sager, 1990-01-01 Since the advent of the computer, terminology management can be carried out by almost anyone who has learnt to use a computer. Terminology management has proved to be an efficient tool in international communications in industry, education and international organisations. Software packages are readily available and international corporations often have their own terminology database. Following these developments, translators and terminologists are confronted with a specialised form of information management involving compilation and standardisation of vocabulary, storage, retrieval and updating. *A Practical Course in Terminology Processing* provides the key to methods of terminology management for the English language for general and specific purposes. This unique course has been developed on the basis of years of teaching experience and research at the University of Manchester Institute of Science and Technology (UMIST) UK and is particularly suitable for translation courses, freelance translators, technical writers as well as for non-linguists who are confronted with terminology processing as part of their profession.
