Numbers Beginning To Learn About:

Mathematics Learning in Early Childhood National Research Council, Division of Behavioral and Social Sciences and Education, Center for Education, Committee on Early Childhood Mathematics, 2009-12-13 Early childhood mathematics is vitally important for young children's present and future educational success. Research demonstrates that virtually all young children have the capability to learn and become competent in mathematics. Furthermore, young children enjoy their early informal experiences with mathematics. Unfortunately, many children's potential in mathematics is not fully realized, especially those children who are economically disadvantaged. This is due in part to a lack of opportunities to learn mathematics in early childhood settings or through everyday experiences in the home and in their communities. Improvements in early childhood mathematics education can provide young children with the foundation for school success. Relying on a comprehensive review of the research, *Mathematics Learning in Early Childhood* lays out the critical areas that should be the focus of young children's early mathematics education, explores the extent to which they are currently being incorporated in early childhood settings, and identifies the changes needed to improve the quality of mathematics experiences for young children. This book serves as a call to action to improve the state of early childhood mathematics. It will be especially useful for policy makers and practitioners, those who work directly with children and their families in shaping the policies that affect the education of young children.

Teaching and Learning Early Number Ian Thompson, 2008-10-16 This richly varied text offers generous support for every aspect of the teacher's role while constantly reminding us that mathematical activity is not a decontextualised skill that children possess but part of their identity, their way of being in the world, engaged with the world energetically and playfully trying to make sense of it. Mary Jane Drummond, formerly of the Faculty of Education, University of Cambridge, UK. *Teaching and Learning Early Number* is a bestselling guide for all trainee and practising Early Years teachers and classroom assistants. It provides an accessible guide to a wide range of research evidence about the teaching and learning of early number. Major changes in the primary mathematics curriculum over the last decade, such as the National Numeracy Strategy, the Primary National Strategy, the Early Years Foundation Stage, and the Williams Review, have greatly influenced the structure of this new edition. The book includes a new introductory chapter to set the scene, six further new chapters including Mathematics through play, Children's mathematical graphics, and Interview-based assessment of early number knowledge, six completely re-written chapters, and two updated chapters. A new concluding chapter looking to the future. The chapters can be read in a standalone fashion and many are cross-referenced to other parts of the book where specific ideas are dealt with in a different manner. Issues addressed include new research on the complex process of counting and on children's written mathematical marks, counting in the home environment and play in the school setting, the importance of mathematical representations, and of ICT in children's understanding of number, errors and misconceptions, and the assessment of children's number knowledge.
