Williams, 1984 Alzheimer's Disease Abraham Fisher, Israel Hanin, Chaim Lachman, 2012-12-06 Alzheimer's disease is a primary neurodegenerative disease whose incidence

and prevalence is rapidly approaching epidemic proportions A major reason for this is that man is living longer than he has ever lived before and the likelihood of contracting the disease is significantly greater within the elderly portion of the population The problem becomes even more acute in the light of recent estimates which predict that the number of people living beyond the age of 65 is expected to continue to increase The impact of these statistics on the family and the health care industry in terms of time effort and cost are staggering A recent report issued by the Michigan Task Force on Alzheimer's Disease and Related Conditions 1987 effectively underscores this last point Each person with a dementing disease requires an average of seven years of care either at home or in a residential care facility Care provided at home is estimated to cost about 12 000 annually for a total of 84 000 per person This is a conservative figure however because many persons with dementia spend their last few years in a nursing home at an average cost of 22 000 per year and some spend from 10 to 15 years in a nursing home for a total cost of 220 000 to 330 000 **Psychiatric-mental Health Nursing** Patricia A.

Psychiatric Mental Health Nursing Patricia G. O'Brien,Winifred Z. Kennedy,Karen A. Ballard,2012-02-15 A comprehensive easy to read introductory text for nursing students The book is organized into three sections Introduction to Psychiatric Mental Health Nursing Mental Health Disorders and Nursing Management of Special Populations This unique text is the most comprehensive psychiatric mental health resource available Advanced Practice Psychiatric Nursing Ann Wolbert Burgess,1997 In this era of managed care this text helps health professionals properly assess manage and monitor the overall care of persons who have emotional and psychiatric problems This new text includes practical clinical skills numerous case studies and references and suggested readings at the end of each chapter In addition this books thoroughly explains effective collaboration with other health disciplines including when to seek referral and consultation Nurses nurse practitioners Theoretical Nursing Afaf Ibrahim Meleis,2011 An additional assumption was that the processes for theory development were new to nursing and hence nurses in graduate programs learned strategies for advancing knowledge from other disciplines This assumption was debunked with the knowledge that nurses were always engaged in knowledge development driven by their experiences in clinical practice Because of these assumptions most of the early writing about theory development was about outlining strategies that should be used rather than strategies that have already been used in the discipline to develop theories Theorists themselves did not uncover or adequately discuss ways by which they developed their theories therefore the tendency was to describe processes that were based on theories developed in other disciplines mainly the physical and social sciences And an implicit assumption was made that there should be a single strategy for theory development some claiming to begin the process from practice and others believing it should be driven by research Provided by publisher
