The Works of the Rev. John Newton ... John Newton,1810 Sound Poetics Seán Street,2017-07-14 This book examines sonic signals as something both heard internally and externally through imagination memory and direct response In doing so it explores how the mind makes sound through experience as it interprets codes on the written page

and creates an internal leitmotif that then interacts with new sounds made through an aural partnership with the external world chosen and involuntary exposure to music and sound messages both friendly and antagonistic to the identity of the self It creates an argument for sound as an underlying force that links us to the world we inhabit an essential part of being in the same primal sense as the calls of birds and other inhabitants of a shared earth Street argues that sound as a poetic force is part of who we are linked to our visualisation and sense of the world as idea and presence within us This incredibly interdisciplinary book will be of great interest to scholars of radio sound media and literature as well as philosophy and psychology
