Global Geographies of the Internet Barney Warf, 2012-08-01 Today roughly 2 billion people use the internet and its applications have flourished in number and importance This volume will examine the growth and geography of the internet from a political economy perspective Its central motivation is to illustrate that cyberspace does not exist in some aspatial void but is deeply rooted in national and local political and cultural contexts Toward that end it will invoke a few major theorists of cyberspace but apply their perspectives in terms that are accessible to readers with no familiarity with them Beyond summaries of the infrastructure that makes the internet possible and global distributions of users it delves into issues such as the digital divide to emphasize the inequalities that accompany the growth of cyberspace It also addresses internet censorship e commerce

and e government issues that have received remarkably little scholarly attention particularly from a spatial perspective Throughout it demonstrates that in cyberspace place matters so that no comprehensive understanding of the internet can be achieved without considering how it is embedded within and in turn changes local institutional and political contexts Thus the book rebuts simplistic death of distance views or those that assert there is or can be a one size fits all cookie cutter model of the internet applicable to all times and places

The Turn to Infrastructure in Internet Governance Francesca Musiani,Derrick L. Cogburn,Laura DeNardis,Nanette S. Levinson,2016-03-02 This edited volume brings together experts from around the world to provide coverage and analysis of infrastructure s role in Internet governance both now and in the future Never in history have conflicts over Internet

governance attracted such widespread attention High profile controversies include the disclosures about NSA surveillance by intelligence analyst Edward Snowden controversy over a decision by the US government to relinquish its historic oversight of Internet names and numbers and countless cybersecurity breaches involving unauthorized access to Internet users personal data Much of the Internet governance ecosystem both technical architecture and coordinating institutions is behind the scenes but increasingly carries significant public interest implications An area once concealed in institutional and technological complexity is now rightly bracketed among other shared global issues such as environmental protection and human rights that have considerable global implications but are simply incongruous with national borders This transformation into an era of global governance by Internet infrastructure presents a moment of opportunity for scholars to bring these politicized infrastructures to the foreground
