National Strategic Plan Modeling And Data Systems For Wildland Fire And Air Quality:

National Strategic Plan David V. Sandberg, 1999 A technical discussion of the implementation development of models data systems used to manage the air quality impacts of wildland prescribed fires Strategies priorities in the plan were generated by the Express Team a diverse group of 86 subject matter experts who attended a national planning workshop This plan provides a conceptual design as a first step toward balancing the goals of land managers who use fire to manage ecosystems air resource managers who aim to reduce the impacts of fires on air quality Recommends nine strategies as a synthesis of internal discussions review comments **National Strategic Plan** ,1999 **General Technical Report PNW-GTR** ,1999 Wildland Fire in Ecosystems ,2003 This state of knowledge review about the effects of fire on air quality can assist land fire and air resource managers with fire and smoke planning and their efforts to explain to others the science behind fire related program policies and practices to improve air quality Chapter topics include air quality regulations and fire characterization of emissions from fire the transport dispersion and modeling of fire emissions atmospheric and plume chemistry air quality impacts of fire social consequences of air quality impacts and recommendations for future research **Wildland Fire in Ecosystems** David V. Sandberg, 2009-09 Wildland fire is an integral part of ecosystem mgmt and is essential in maintaining functional ecosystems but air pollutants emitted from those fires can be harmful to human health and welfare This review of what is known about the effects of fire on air quality will assist those in the fire and air quality mgmt communities Contents 1 Intro Scope Framework Prior Work Changes in Fire Policy 2 Air Quality Regulations and Fire 3 Overview of Air Pollution from Fire 4 Characterization of Emissions from Fires 5 Transport Dispersion and Modeling of Fire Emissions 6 Atmospheric and Plume Chemistry 7 Estimating the Air Quality Impacts of Fire 8 Consequences of Fire on Air Quality 9 Recommend for Future Research Illus **Wildland Fires and Air Pollution** Andrzej Bytnerowicz, 2009 Wildland fires are one of the most devastating and terrifying forces of nature While their effects are mostly destructive they also help with regeneration of forests and other ecosystems Low intensity fires clear accumulating biomass reducing risk of catastrophic crown fires and can be used as an effective management tool This book presents current understanding of wildland fires and air quality as well as their effects on human health forests and other ecosystems in the first section of the book the basics of wildland fires and resulting emissions are presented from the perspective of changing global climate air quality impairment and effects on environmental and human health and security in the second section effects of wildland fires on air quality visibility and human health in various regions of the Earth are discussed The third section of the book deals with complex issues of the ecological impacts of fires and air pollution in forests and chaparral in North America The fourth section discusses various management issues facing land and fire managers which are related to wildfires use of prescribed fires and air quality This section also presents various modeling systems used for describing fire dangers and behavior as well as smoke and air pollution predictions applied in the risk assessment

analysis The book concludes with a series of expert recommendations for wildland fire and atmospheric research

Remote Sensing Modeling and Applications to Wildland Fires John J. Qu, William Sommers, Ruixin Yang, Allen Riebau, Menas Kafatos, 2014-12-12 Scientists and managers alike need timely cost effective and technically appropriate fire related information to develop functional strategies for the diverse fire communities Remote Sensing Modeling and Applications to Wildland Fires addresses wildland fire management needs by presenting discussions that link ecology and the physical sciences from local to regional levels views on integrated decision support data for policy and decision makers new technologies and techniques and future challenges and how remote sensing might help to address them While creating awareness of wildland fire management and rehabilitation issues hands on experience in applying remote sensing and simulation modeling is also shared This book will be a useful reference work for researchers practitioners and graduate students in the fields of fire science remote sensing and modeling applications Professor John J Qu works at the Department of Geography and GeoInformation Science at George Mason University GMU USA He is the Founder and Director of the Environmental Science and Technology Center ESTC and EastFIRE Lab at GMU

Wildfire Policy Dean Lueck, Karen M. Bradshaw, 2013-06-17 During the five decades since its origin law and economics has provided an influential framework for addressing a wide array of areas of law ranging from judicial behaviour to contracts This book will reflects the first ever forum for law and economics scholars to apply the analysis and methodologies of their field to the subject of wildfire The only modern legal work on wildfire the book brings together leading scholars to consider questions such as How can public policy address the effects of climate change on wildfire and wildfire on climate change Are the environmental and fiscal costs of ex ante prevention measures justified What are the appropriate levels of prevention and suppression responsibility borne by private state and federal actors Can tort liability provide a solution for realigning the grossly distorted incentives that currently exist for private landowners and government firefighters Do the existing incentives in wildfire institutions provide incentives for efficient private and collective action and how might they be improved
