Spatial Database Transfer Standards H. Moellering, 2013-10-22 Since the 1960 s individuals and organisations throughout the world have been building geographic databases used in conjunction with geographic hardware and software systems to collect analyse display and archive digital data Through the years it was recognised that efficiencies could be gained if the geographic database built by one group could be used by multiple users across different computer systems and formats Therefore it was acknowledged that spatial database transfer standards were needed to facilitate the exchange and transfer of digital geographic data Throughout the 1980 s several organisations worldwide began working on the problem of producing spatial database transfer standards As this work was initiated research workers began to informally compare notes and developments The International Cartographic Association ICA recognising the worldwide importance of standards organised a Standards Working Group The initial goal of this working group was to produce a monograph reporting on the present state of development in digital database transfer standards This book is a unique collection of reports by individual nations and international organisations that describe existing geographic standards and summarize efforts to develop geographic database transfer standards worldwide **The National Geographic Magazine** ,1911 **World Spatial**

Metadata Standards Harold Moellering, H.J. Aalders, Aaron Crane, 2005-11-08 World Spatial Metadata Standards represents years of work by the ICA Spatial Data Standards Commission during the 1995 2003 ICA cycles It consists of an Introduction and six Regional Summary chapters that describe the spatial metadata activities happening in Europe North America Asia Pacific Latin America Africa Middle East and the ISO community These chapters provide the broader context and description of the milieu in which these standards operate so that the reader can more easily understand the scientific and technical framework from whence a particular standard has emerged The third section is a complete listing of all of the three levels of scientific and technical characteristics and their meaning by the inclusion of a set of definitions for metadata terms used in the book The fourth section and by far the largest contains 22 chapters that assess each of the major national and international spatial metadata standards in the world and also contains a few representative subject matter profile derived from a major standard They have been carried out in terms of all three levels of characteristics Each assessment has been carried out by a Commission member who has been an active participant in the development of the standard being assessed in the native language of that standard The fifth section contains a summary cross table wall size summary chart that includes all 22 standards and profiles that are cross tabulated by 70 of the crucial characteristics The columns provide a thumbnail sketch of each individual standard while the rows facilitate a quick comparison of individual critical characteristics across all of the 22 standards and profiles Many readers of our previous book have begun their standards evaluation process with this cross table This current book on spatial metadata standards has been purposely designed to serve as a companion working volume to the 1997 book the Commission published on Spatial Data Transfer Standards Moellering Hogan Editors

ISBN 008042433 Assesses the National and International Spatial Metadata Standards Profiles in their native languages and then reports the analysis in a scientifically consistent manner in a widely used scientific language English Provides a summary Crosstable of the 22 Spatial Metadata Standards Profiles in a large wall sized table highlighting 70 of the most important scientific characteristics Provides the scientific and technical detail for each of the 22 Standards Profiles to 12 primary levels 58 second levels and about 278 tertiary levels Scientific and technical characteristics can be used for a wide variety of uses with spatial metadata and associated standards *Catalog of Copyright Entries. Fragile World William T. Cavanaugh,2018-05-22 In *Fragile World Ecology and the Church* scholars and activists from Christian communities as far flung as Honduras the Philippines Colombia and Kenya present a global angle on the global ecological crisis in both its material and spiritual senses and offer Catholic resources for responding to it This volume explores the deep interconnections for better and for worse between the global North and the global South and analyzes the relationship among the physical environment human society culture theology and economics the integral ecology described by Pope Francis in *Laudato Si* Integral ecology demands that we think deeply about humans and the physical environment but also about the God who both created the world and sustains it in being At its root the ecological crisis is a theological crisis not only in the way that humans regard creation and their place in it but in the way that humans

think about God For Pope Francis in *Laudato Si* the root of the crisis is that we humans have tried to put ourselves in God's place According to Pope Francis therefore A fragile world entrusted by God to human care challenges us to devise intelligent ways of directing developing and limiting our power
