agreed to adopt a universal legal agreement on climate change at the 21st Conference of Parties COP21 to the United Nations Framework Convention on Climate Change UNFCCC in Paris in 2015 The agreement will come into force no later than 2020 This book focuses on the prospects for global agreement how to encourage compliance with any such agreement and perspectives of key players in the negotiations the United States India China and the EU It finds that there is strong commitment to the established UN institutions and processes within which the search for further agreed actions will occur There are already a myriad of local and regional policies that are helping to reduce greenhouse gas emissions and build mutual confidence However the chapters in the book also highlight potential areas of discord For instance varying interpretations of the common but differentiated responsibilities of developing countries agreed as part of the UNFCCC could be a major sticking point for negotiators When combined with other issues such as the choice of consumption or production as the basis for mitigation commitments the appropriate time frame and base date for their measurement and whether level or intensity commitments are to be negotiated the challenges that need to be overcome are considerable The authors bring to bear insights from economics public finance and game theory     Routledge Handbook of Climate Change and Society Constance Lever-Tracy, 2010-07-12 The Handbook of Climate Change and Society brings together the latest research on climate change from the social sciences It comprehensively covers social causes impacts recognition and responses to climate change and features cutting edge research by leading scholars from Australia Canada Europe UK and USA and new material on China India and South East Asia     *Global Climate Governance* David Coen, Julia Kreienkamp, Tom Pegram, 2020-12-17 Climate change is one of the most daunting global policy challenges facing the international community in the 21st century This Element takes stock of the current state of the global climate change regime illuminating scope for policymaking and mobilizing collective action through networked governance at all scales from the sub national to the highest global level of political assembly It provides an unusually comprehensive snapshot of policymaking within the regime created by the United Nations Framework Convention on Climate Change UNFCCC bolstered by the 2015 Paris Agreement as well as novel insight into how other formal and informal intergovernmental organizations relate to this regime including a sophisticated EU policymaking and delivery apparatus already dedicated to tackling climate change at the regional level It further locates a highly diverse and numerous non state actor constituency from market actors to NGOs to city governors all of whom have a crucial role to play     Global Environmental Governance and Small States Michelle Scobie, 2019 *Global Environmental Governance* gives the perspectives of small states on some of the most important issues of the anthropocene from trade climate change and energy security to tourism marine governance and heritage Providing an in depth analysis of global environmental governance and its impact on Caribbean small island developing states SIDS Michelle Scobie explores which dynamics and contexts influence current policy and future environmental outcomes for one of the most biodiverse regions of the planet     Environmental Challenges and Governance Sacchidananda Mukherjee, Debashis

**Greening the Globe** Ann Hironaka, 2014-09-15 Recent decades have seen a rapid expansion of environmental activity in the world including the signing of a growing number of environmental treaties and the formation of international organizations like the United Nations Environment Programme UNEP Greening the Globe employs world society theory aka world polity theory or sociological institutionalism to explore the origins and consequences of international efforts to address environmental problems Existing scholarship seems paradoxical case studies frequently criticize treaties and regulatory structures as weak and ineffective yet statistical studies find improvements in environmental conditions This book addresses this paradox by articulating a bee swarm model of social change International institutions rarely command the power or resources to directly impose social change Nevertheless they have recourse via indirect mechanisms setting agendas empowering various pro environmental agents and propagating new cultural meanings and norms As a result world society generates social change even if formal institutional mechanisms and sanctions are weak

**Governing Climate Change** Andrew Jordan, Dave Huitema, Harro van Asselt, Johanna Forster, 2018-05-03 Climate change governance is in a state of enormous flux New and more dynamic forms of governing are appearing around the international climate regime centred on the United Nations Framework Convention on Climate Change UNFCCC They appear to be emerging spontaneously from the bottom up producing a more dispersed pattern of governing which Nobel Laureate Elinor Ostrom famously described as polycentric This book brings together contributions from some of the world's foremost experts to provide the first systematic test of the ability of polycentric thinking to explain and enhance societal attempts to govern climate change It is ideal for researchers in public policy international relations environmental science environmental management politics law and public administration It will also be useful on advanced courses in climate policy

and governance and for practitioners seeking incisive summaries of developments in particular sub areas and sectors This title is also available as Open Access on Cambridge Core [France on the World Stage](#) M. Maclean,J. Szarka,2008-04-30

Compston,I. Bailey,2008-11-05

This study analyses the politics of climate policy in a range of affluent democracies and at EU level in order to identify political strategies that would make it easier for governments to make major cuts in greenhouse gas emissions without sustaining significant political damage **Rethinking Authority in Global Climate Governance** Thomas

Hickmann,2015-10-16 In the past few years numerous authors have highlighted the emergence of transnational climate initiatives such as city networks private certification schemes and business self regulation in the policy domain of climate change While these transnational governance arrangements can surely contribute to solving the problem of climate change their development by different types of sub and non state actors does not imply a weakening of the intergovernmental level On the contrary many transnational climate initiatives use the international climate regime as a point of reference and have adopted various rules and procedures from international agreements Rethinking Authority in Global Climate Governance puts forward this argument and expands upon it using case studies which suggest that the effective operation of transnational climate initiatives strongly relies on the existence of an international regulatory framework created by nation states Thus this book emphasizes the centrality of the intergovernmental process clustered around the United Nations Framework Convention on Climate Change UNFCCC and underscores that multilateral treaty making continues to be more important than many scholars and policy makers suppose This book will be of great interest to students and scholars of global environmental politics climate change and sustainable development [Contesting Global Environmental Knowledge, Norms and Governance](#) M. J. Peterson,2019-01-08

Through theoretical discussions and case studies this volume explores how processes of contestation about knowledge norms and governance processes shape efforts to promote sustainability through international environmental governance The epistemic communities literature of the 1990s highlighted the importance of expert consensus on scientific knowledge for problem definition and solution specification in international environmental agreements This book addresses a gap in this literature insufficient attention to the multiple forms of contestation that also inform international environmental governance These forms include within discipline contestation that helps forge expert consensus inter disciplinary contestation regarding the types of expert knowledge needed for effective response to environmental problems normative and practical arguments about the proper roles of experts and laypersons and contestation over how to combine globally developed norms and scientific knowledge with locally prevalent norms and traditional knowledge in ways ensuring effective implementation of environmental policies This collection advances

understanding of the conditions under which contestation facilitates or hinders the development of effective global environmental governance The contributors examine how attempts to incorporate more than one stream of expert knowledge and to include lay knowledge alongside it have played out in efforts to create and maintain multilateral agreements relating to environmental concerns It will interest scholars and graduate students of political science global governance international environmental politics and global policy making Policy analysts should also find it useful **Regional Environmental**

**Politics in Northeast Asia** Jeongwon Bourdais Park, 2018-11-12 The share of global CO<sub>2</sub> emissions from the core Northeast Asian NEA countries in 2015 was estimated to be as high as 33.63 percent Representing 28.21, 3.67 and 1.75 percent of total global emissions China Japan and South Korea were ranked the first fifth and seventh largest contributors respectively Some parts of China the Republic of Mongolia the Russian Far East and Southeast Asia have long been on serious alert due to accelerated deforestation With their rapid population growth and economic development the core countries of Northeast Asia are responsible both directly and indirectly for numerous environmental problems Urgent individual and collective action is required from the region's governments Against the backdrop of debate on how to understand Northeast Asia as a region Park focuses on the major regional economies of China Japan and South Korea along with Russia North Korea and the Republic of Mongolia due to both their geopolitical proximity and their significance to the region The author attempts to answer the questions How far has regional environmental cooperation progressed in Northeast Asia and Why are Northeast Asian countries reluctant to cooperate further on urgent transboundary and regional environmental issues
