Future Automotive Fuels and Energy Bruce Morey,2013-08-05 This book sheds light on three essential questions 1 What is the likely supply of gasoline and diesel from oil worldwide to power light vehicles and trucks through 2030 2035 2 Could any other fuel economically replace gasoline Will different parts of the world answer that question differently 3 How will the answers to these questions affect what we engineer make and drive in 2030 2035 As difficult as it is to predict timing of these events the book presents reasonable assumptions and alternative scenarios Since a switch to alternative technologies will require substantial investment it is critical to have a sense of when Despite the global reach of the automotive industry it is unlikely that a solution for one region will fit all A more reasonable goal is a set of projected ecosystems using differing amounts of oil electricity or alternative fuels From this automotive managers and leaders can get a sense of how to make business decisions for the future To frame comparisons the author qualitatively assesses each alternative against these criteria 1 energy density 2 scale 3 efficiency of use 4 consumer convenience 5 vehicle technical maturity 6 delivery infrastructure maturity 7 production infrastructure maturity 8 rate of progress Some alternative fuels will naturally be higher in some categories than others For example gasoline has higher energy density but when burned in internal combustion engines has low efficiency Batteries on the other hand have low energy density but are efficient for powering electric motors For mapping out a long term future and deciding how best to invest resources a comparison of these critical criteria should help The book is concisely written for executives decision makers academics automotive engineers and others who want or need a long range view of trends that will influence vehicle fuels for the next 20 years

The Climate Crisis: A Moderate Approach to the Energy Debate Miguel Angel Rondon Segura,2021-10-22 Are you a climate denier or climate believer The subject of energy and climate have become so mainstream and intertwined with politics that today s discussion has been split into these two antagonistic buckets leaving no middle ground You re boxed from the beginning The Intergovernmental Panel on Climate Change IPCC is the United Nations body responsible for assessing the science related to climate change and in their harshest scenario they point to temperatures raising by an average of 6 degrees Celsius by the end of the century At the same time the goal to limit global warming below 2 degrees Celsius was picked as a consensus figure among the scientific community The reality is that we do not know the exact impact of exceeding this target and we can only estimate and predict what could happen to the planet based on our interpretation of how systems respond In this scenario what do we do Do we destroy the entire energy system as we know it Do we ignore the potential problem Or do we apply a business perspective and find solutions that allow

us to maintain our lifestyles without the risk of making this planet uninhabitable This book is about trying to bring the denier and believer sides together to analyze the energy problem from a systems and business perspective by introducing key aspects of the energy debate defining the problem and presenting possible solutions In essence more profits less carbon
