Natural Grasslands:

Natural Grasslands Robert T. Coupland, 1992 Grasslands of the World Victor R. Squires, Jürgen Dengler, Limin Hua, Haiying Feng, 2018-09-05 This book begins with a brief account of the extraordinary sequence of events that led to emergence of grasslands as major vegetation formations that now occupy some of the driest and hottest and the highest and coldest on earth as well as vast steppes and prairies in more temperate climates. It is the story of grasses successfully competing with forests and woodlands aided and abetted by grazing herbivores and by humans and their use of fire as a tool. It is a story of adaptation to changing climates and the changing biophysical environments. A major focus of the book is the Palaearctic biogeographic realm that extends over some 45 million km² and thus more than 1/3 of the terrestrial ice-free surface on Earth. It comprises extensive grasslands of different types and origin which can be subdivided into 1 natural grasslands with 1a steppes climatogenic in dry climates 1b arctic alpine grasslands climatogenic in cold climates and 1c azonal and extrazonal grasslands pedogenic and topogenic as well as 2 secondary grasslands created and sustained by human activities such as livestock grazing mowing or burning. Grasslands of the Palaearctic do not only form a major basis for the agriculture of the region and thus its food supply but are also crucial for other ecosystem services and host a supra-proportional part of the realm's plant and animal diversity. To reflect that suitability of grasslands for biodiversity strongly depends on their state we apply the term High Nature Value grassland to those natural grasslands that are not degraded in good state and those secondary grasslands that are not intensified semi-natural. The situation in a variety of countries where grasslands are evolving under the influence of global climate change is also considered. Case studies are presented on Southern Africa Eastern Africa India China South America North America and Australia. The concluding chapter examines a set of themes arising from the chapters that make up the bulk of this book. The following provide a focus: recent history of grassland biomes brief recap of current thinking and recent trends with special reference to dry grasslands in the Palearctic regions the current status of grasslands and germplasm resources biodiversity an overview management systems that ensure sustainability how to recover degraded grasslands socio-economic issues and considerations in grassland management the impacts of environmental problems in grasslands such as future climate change and intensification and the problems prospects facing pastoralists and other grassland-based livestock producers **Grassland Ecosystems of the World:**

Analysis of Grasslands and Their Uses Robert T. Coupland, R. T. Coupland, 1979-05-10 Background The nature of grassland Problems in studying grassland ecosystems Natural temperate grasslands Semi-natural temperate meadows and pastures Tropical grasslands Arable grasslands Croplands **East Africa's grasses and fodders: Their ecology and husbandry** G. Boonman, 2013-03-09 The series Tasks for Vegetation Science is devoted to a variety of research aspects in vegetation science pure as well as applied. Of the applied problems one of the most pressing is to achieve better knowledge and improvement of the pasture vegetation in tropical and subtropical regions. As series editor I was impressed by the sheer

volume of useful scientific information concerning pasture plants from East Africa collected during many years by Dr Boonman and compiled in one manuscript Dr Boonman first came to East Africa in 1963 on an overland journey along the river Nile which took him from Alexandria in Egypt to Lake Victoria in Uganda and Kenya and back again After a brief spell as a cotton agronomist in the Sudan Gezira he joined the grassland research team at Kitale Kenya in 1966 Improvement of seed yield of tropical grasses was his principal interest which finally led him into the field of breeding grasses Well known varieties from his work include Boma Elmba Rhodesgrass as well as Clone 13 Elephantgrass In 1979 he was recalled to The Netherlands to head a cooperative seed company involved in the breeding of grasses and cereals The author has focused this study on one region Eastern Africa Global application of theories runs into conflicts too easily with local types of farming if not with bare economics Very few books can be found that describe existing practices and seek local answers by digging deep in the stacks of old local reports

Grasslands of the World Food and Agriculture Organization of the United Nations, 2005-01-01 This book brings together information on the contrasting characteristics condition present use and problems of the world's main natural grasslands Since grassland is commercialized through the grazing animal particular attention is paid to the livestock production systems associated with each main type Grazing resources are more than simply edible herbage many other factors have to be taken into account notably water in all areas and shelter in winter cold climates Seasonality of forage supply is a characteristic of almost all grazing lands so the strategies for dealing with lean seasons are described The main problems of each type are mentioned and possible strategies for their sustainable management discussed taking into account their multiple functions not only livestock production The book is primarily aimed at agricultural scientists educationalists extensionists and decision makers with interests in responsible use of extensive grasslands

Grasslands in Europe Peter Veen, Richard Jefferson, Jacques de Smidt, Jan van der Straaten, 2014-04-14 Grasslands are an important element of European nature About half of Europe's endemic species depend on grasslands whether in mountains lowlands river plains or coastal areas Many grasslands originate in traditional agricultural landscapes Modern intensification however brings many of these ecosystems under threat Grasslands in Europe is a tribute to these important ecosystems It was written by an international team of grassland experts who describe twenty four case studies from countries in all of Europe ranging from the grasslands of Gotland and land Sweden to the Spanish Dehesa and from the hay meadows of the British Pennine Dales to the steppes of Turkish Anatolia Together these case studies provide a fascinating glimpse into the various European grasslands their value for nature culture and agriculture and the threats they are facing today The accessible text as well as the rich illustrations will appeal to a wide audience Grasslands in Europe contains a large number of stunning full colour photographs of grassland landscapes species and cultural history It also contains many maps and infographics Thematic chapters provide essential background information on topics such as grassland fauna the history of agriculture grassland communities and the connection between grasslands and climate The book also analyses the

opportunities and risks of EU policy to conserve these grasslands It offers a farmer centred outlook to manage and to maintain the European grasslands of high nature value **Encyclopedia of the World's Biomes** ,2020-06-26 Encyclopedia of the World s Biomes is a unique five volume reference that provides a global synthesis of biomes including the latest science All of the book s chapters follow a common thematic order that spans biodiversity importance principal anthropogenic stressors and trends changing climatic conditions and conservation strategies for maintaining biomes in an increasingly human dominated world This work is a one stop shop that gives users access to up to date informative articles that go deeper in content than any currently available publication Offers students and researchers a one stop shop for information currently only available in scattered or non technical sources Authored and edited by top scientists in the field Concisely written to guide the reader though the topic Includes meaningful illustrations and suggests further reading for those needing more specific information **Biodiversity Conservation and Habitat Management - Volume I** Franccesa

Grassland Management for Sustainable Agroecosystems Abad Chabbi, Gianni Bellocchi, 2020-04-01 This book is a remarkable work that brings together the most recent international research on grassland management covering a broad range of topics and geographical areas The different contributions explore the complex relationships between landscape climate features and soil fertility with the support of observational data and modeling Clearly this is a wide and multifaceted area of research that opens up new prospects for the management of a biome which should no longer be considered only as a feed resource for domestic herbivore farming but also and above all as a source of ecosystem services to society and a contributor to the sustainability of agriculture Textbooks like this positively demonstrate the importance and significance of how grassland science when viewed in this way can make tangible the progress in understanding the complexity of grassland management and its current and future challenges
