Cell and Tissue Reaction Engineering Regine Eibl, Dieter Eibl, Ralf Pörtner, Gerardo Catapano, Peter Czermak, 2008-09-30 The completion of the Human Genome Project and the rapid progress in cell biology and biochemical engineering are major forces driving the steady increase of approved biotech products especially biopharmaceuticals in the market Today mammalian cell products products from cells primarily monoclonals cytokines recombinant glycoproteins and increasingly vaccines dominate the biopharmaceutical industry Moreover a small number of products consisting of in vitro cultivated cells cells as product for regenerative medicine have also been introduced in the market Their efficient production requires comprehensive knowledge of biological as well as biochemical mammalian cell culture fundamentals e.g cell characteristics and metabolism cell line establishment culture medium optimization and related engineering principles e.g bioreactor design process scale up and optimization In addition new developments focusing on cell line development animal free culture media disposables and the implications of changing processes multi purpose facilities have to be taken into account While a number of excellent books treating the basic methods and applications of mammalian cell culture technology have been published only little attention has been afforded to their engineering aspects The aim of this book is to make a contribution to closing this gap it particularly focuses on the interactions between biological and biochemical and engineering principles in processes derived from cell cultures It is not intended to give a comprehensive overview of the literature This has been done extensively elsewhere

Life Sciences Industry Basanta Kumara Bahera, Ram Prasad, Shyambhavee Behera, 2021-08-24 Basic principles of applied life sciences such as recombinant DNA technology is used in most life sciences industries marketing bio formulations for designing more effective protein based drugs such as erythropoietin and fast acting insulin etc In recent times genetically engineered host cells from mammal animal and plants are also being used in life sciences industries to manufacture biologics This book discusses the most basic as well advanced issues on biological products for successfully managing a life sciences industry It

elucidates the life cycle of biological molecules right from the conceptual development of different types of biopolymers and their subsequent transfer from the conical flasks in laboratory to life sciences industries for large scale production and marketing. It focuses on sustainable longevity in the life cycle of commercial biopolymers. Cumulative facts and figures in this volume would immensely help in inspiring life sciences industry promoters to monitor value chain transfer process of biologics for better profitability. Additionally, it would serve as a perusal document for the students and researchers interested in entrepreneurial ventures or having their own start up projects for the commercialization of biologics.

Cell Culture and Upstream Processing Michael Butler, 2007-08-07 Upstream processing refers to the production of proteins by cells genetically engineered to contain the human gene which will express the protein of interest. The demand for large quantities of specific proteins is increasing the pressure to boost cell culture productivity and optimizing bioreactor output has become a primary concern for most pharmaceutical companies. Each chapter in Cell Culture and Upstream Processing is taken from presentations at the highly acclaimed IBC conferences as well as meetings of the European Society for Animal Cell Technology ESACT and Protein Expression in Animal Cells PEACe and describes how to improve yield and optimize the cell culture production process for biopharmaceuticals by focusing on safety, quality, economics and operability and productivity issues. Cell Culture and Upstream Processing will appeal to a wide scientific audience both professional practitioners of animal cell technology as well as students of biochemical engineering or biotechnology in graduate or high level undergraduate courses at university.

Modern Biopharmaceuticals, 4 Volume Set Jörg Knäblein, 2005-10-28 The biopharmaceutical market has come along way since 1982 when the first biopharmaceutical product recombinant human insulin was launched. Over 120 such products are currently being marketed around the world including nine blockbuster drugs. The global market for biopharmaceuticals which is currently valued at US 41 billion has been growing at an impressive compound annual growth rate of 21% over the previous five years. With over one third of all pipeline products in active development are biopharmaceuticals this segment is set to continue outperforming the total pharmaceutical market and could easily reach US 100 billion by the end of this decade.

Urch, 2008-02-02 Soon after the first description of monoclonal antibodies in 1976 there was enormous interest in the clinical application of antibodies especially in the context of cancer Antibodies appeared to offer the magic bullet that would allow the specific destruction of neoplastic cells However many years effort resulted in very few cases of successful immunotherapy with antibodies As a result there was a major backlash against antibody therapy and the field lost a considerable amount of popularity Fashion in science as well as in other things tends to be cyclical Antibody based therapy is once again attracting scientists and clinicians There are several reasons for the renewed optimism certainly the experience of the last two decades has provided a wealth of information about problems associated with antibody therapy and possible solutions to these problems Recombinant antibody engineering has rejuvenated the field allowing both the modification of antibodies to improve their in vivo properties and the isolation of novel antibody molecules by such techniques as phage display The results of recent clinical trials have demonstrated unequivocally the benefit of antibody therapy in a number of settings and finally more careful consideration has been taken of the types of disease best treated using this approach **Cisgenics and Transgenics** Bhupendra Koul, 2022-08-31 This book presents up to date information on various vector less direct physical chemical and vector mediated indirect Agrobacterium mediated plant transformation techniques It summarizes various strategies that facilitate a gene from lower organism to be expressed in higher plants and also in silico designing of synthetic gene for higher expression It also highlights the importance of strong promoters to drive the expression of transgenes This book encompasses the advantages and drawbacks of cisgenesis and transgenesis their implications towards sustainable crop improvement and their future prospects The importance limitations challenges recent developments and future prospects of molecular pharming is also discussed The book concludes with a chapter that summarizes the major contribution of GM crops towards global food security and economy advances in genome editing for crop improvement challenges and risk associated with the release of GM crops and the future of GM technology This book is meant for students and researchers in the field of life sciences food science and agriculture
