A Field Guide to the Butterflies of Romania László Rákosi, 2024-10-22 Through its geographical position varied topography particular climate and complex cultural history Romania has managed to sustain enormously rich biodiversity Traditional practices which have survived longer than in most other parts of Europe have allowed the preservation of large areas of natural habitat little altered by human activity

All this is reflected in the breadth of lepidoptera encountered in the country from the dazzling Freyer's Purple Emperor to the elusive Moorland Clouded Yellow from the almost bird-like Great Banded Grayling to the diminutive Osiris Blue. This book considers all the species and subspecies of butterflies known to occur in Romania. This identification guide to the butterflies of Romania is set out in a format easy to understand not only by specialists but also for the more general naturalist or butterfly enthusiast. An expansive introduction covers the various life stages: ovum, larva, pupa and imago, biology and ecology as well as protection and conservation and butterfly research. The next section identifies the 14 most important habitat types frequented by butterflies in Romania. For each of the more than 200 species covered, information on taxonomy, identification, habitat, biology, conservation and distribution is presented. Each is illustrated with photographs from nature, primarily adult males and females, but also numerous images of the developmental stages. There follows a complete set of plates of prepared butterflies displaying dorsal and ventral positions, upper and undersides for both males and females. Finally, the male genital armature of several species are illustrated, primarily those difficult or impossible to identify using visual determination. The result is an attractive, practical and portable guide that not only helps identify the butterfly species of Romania but also encourages the reader to more fully appreciate and protect them.

FIELD GUIDE TO INSECTS OF BRITAIN AND NORTHERN EUROPE Bob Gibbons, 2011-10-18. Written by well-known naturalists and photographers, this guide will enable the easy identification of around 1,000 of the more common insects found in the region. The carefully chosen selection represents all insect groups with a bias towards the more prominent species so that all the butterflies, grasshoppers, crickets, damselflies and dragonflies occurring in Britain have been included. Over 700 colour photographs show the species in their natural habitats and around 100 line drawings clearly show important features enabling accurate identification.
