Larousse Encyclopedia of Animal Life Leon Bertin,1972 [The Evolutionary Mechanism of Human Dysfunctional Behavior](#) Ivan Fuchs,2019-04-18 Why is humanity by far the most successful animal in the animal kingdom but when it comes to survival of the fittest we pull against the impulse toward natural selection Unique among vertebrates humans develop and practice varied forms of dysfunctional or maladaptive behavior the graver of which are categorized as mental disorders which doesn't sustain our species Dr Ivan Fuchs explains why this is the case setting his discussion within the fields of psychiatry evolutionary biology and genetics marshalling a wide range research to make a compelling case In this work Dr Ivan Fuchs provides his theory on human dysfunctional behavior rooted in Darwinian evolutionary thinking His theory includes

- 1 An attempt to identify the basic evolutionary mechanism that leads to dysfunctional or maladaptive behavior that is increasing in human populations He proposes that this mechanism consists of progressive relaxation of selection pressures originating in the natural environment as a result of the technological and cultural development in human civilization These developments protect against many natural inconveniences and dangers such as harmful weather conditions scarce or unreliable food supplies cruel even deadly competition for life sustaining or reproductive resources danger of predation and so on The relaxation of natural selection pressures leads to excessive diversification of innate predispositions that due to the complexities of social coexistence has both far reaching beneficial as well as harmful consequences
- 2 Dr Fuchs deals primarily with severe forms of dysfunctional behavior categorized as mental disorders pinpointing those genetically based behavioral complexes which predispose humans to anxiety affective and personality disorders paranoia and schizophrenia
- 3 Dr Fuchs also makes clear that the above innate predispositions cannot lead by themselves to the whole clinical picture of diagnosable mental disorder categories In order for full blown clinical symptomatology to develop the innate predisposition has to interact with influences after childbirth first of all learning

Consequently psychiatric understanding and research has to distinguish sharply between those mental brain structures and functions which constitute the innate predisposition to a certain mental disorder versus those ones involved secondarily during the lifespan This consideration is detailed in the case of schizophrenia spectrum of disorders The above theoretical considerations have important therapeutic preventive and research implications

The Hog Book William Hedgepeth,2008-08-01 The Hog Book is one of the most radical works in the annals of classic animal literature This is the definitive work that touched off the whole recent revolution in our hog awareness leading to the ever spreading acceptance

of pigs as pets as working partners organ donors movie stars and so many other fresh manifestations of the barely tapped porcine potential The Hog Book is also a lot of fun
