Constructive Conversations About Health Marshall Marinker, Fritjof Capra, 2018-08-15 Current health policy is required to respond to a constantly changing social and political environment characterised particularly in Europe by ageing populations increased migration and growing inequalities in health and services With health systems under increasing strain there is a sense that we need to seek new means of determining health policy Much political debate focuses on managerial issues such as the levels of health funding and the setting and missing of targets Meanwhile our moral imperatives our values and principles go relatively unexamined What are these values Can we agree their validity and salience How do we manage the paradox of competing goods Can we find new ways of talking about and resolving our conflicting values and competing priorities in order to create sound appropriate and just health policies for the 21st Century Written by leading health policy makers and academics from many countries Constructive Conversations about Health examines in depth the underlying values and principles of health policy and posits a more enlightened public and political discourse The book will be invaluable for those involved in health policy making and governance politicians healthcare managers researchers ethicists health and social affairs media health rights and patient participation groups The literature on health policy is vast On offer are models of health services economic theory

management theory disquisitions on ethical principles social analyses literally thousands of publications In a globalised and electronically networked world this literature has already generated its own particular language a policy jargon replete with terms that look deceptively familiar terms that will be much in evidence in what now follows terms whose meanings require our closest attention Marshall Marinker *Welfare and the State: Welfare futures* Nicholas Deakin, Catherine Jones Finer, Bob Matthews, 2004 **The Executive Years of the NHS** Brian Edwards, Margaret Fall, 2005 This book provides a big picture look at the progression of the NHS executive boards in their various guises It questions how government should manage public services and health and whether the constitutional principle of parliamentary accountability will always demand that a minister be ultimately in charge Policy Futures for UK Health Zoë Slote Morris, 2006 Helps policy makers and stakeholders think about the future of health in the United Kingdom by summarising the context within which health policy is developed This title identifies key issues pointing out the factors that feed into decision making It also considers trends in the societal environment including ethical and legal contexts *Crooked Thinking or Straight Talk?* Ken Binmore, 2020-01-14 Why can't we think straight about the big issues that face our society Why are we taken in by the phony arguments of populists and scammers Where are the philosophers hiding when we need them to tell us what makes sense They are hiding because they have nothing to say The airy fairy answers offered by writers of footnotes to Plato were wrong two thousand years ago and they are still wrong now All this time we should have been listening to a different but equally venerable branch of matter of fact philosophy pioneered by the much maligned philosopher Epicurus His ideas were suppressed in ancient times as heretical but the development of the theory of games and decisions makes it timely for those of us who care about science to revive his style of thinking not just about the world around us but about ourselves as well The price of transferring our allegiance to Epicurus and his modern followers is that we can no longer enjoy the luxury of being told what we want to hear It would be nice if we were really equipped with a hotline to a metaphysical world of transcendental ideals but the truth is that we are just the flotsam left behind on the beach when the evolutionary tide went out and we have to get real about what will and will not work for our imperfect species before it is too late This book is an attempt to point the way It has no equations and very little jargon nor does it pull any punches either in explaining how game theory works or in exposing the follies of famous metaphysicians
