Gdoutos, Zaira Marioli-Riga, 2013-04-17 This book contains 31 papers presented at the symposium on Recent Advances in Composite Materials which was organized in honor of Professor Stephanos A Paipetis. The symposium took place at Democritus University of Thrace in Xanthi, Greece, on June 12-14, 2003. The book is a tribute to Stephanos A Paipetis, a pioneer of composite materials, in recognition of his continuous original, diversified, and outstanding contributions for half a century. The book consists of invited papers written by leading experts in the field. It contains original contributions concerning the latest developments in composite materials. It covers a wide range of subjects including experimental characterization, analytical modeling, and applications of composite materials. The papers are arranged in the following six sections: General concepts, stress and failure analysis, mechanical properties, metal matrix composites, structural analysis, and applications of composite materials. The first section on general concepts contains seven papers dealing with composites through the pursuit of the consilience among them: computation and mechatronic automation of multiphysics research, a theory of anisotropic scattering wave propagation, multi-material composite wedges, a three-dimensional finite element analysis around broken fibers, and an in situ assessment of the micromechanics of large-scale bridging in ceramic composites.

However, in the last eight years, these methods have become the subject of enormous interest by aerospace manufacturing companies. *Resin Transfer Moulding for Aerospace Structures* describes all aspects of Resin Transfer Moulding (RTM) for aerospace structures. Written by an international team of experts from both industry and academia, it is a comprehensive work providing complete and detailed information on the process of RTM from theoretical modelling to practical experience. With subjects including manufacturing tooling, fabric design, and flow modelling, all covered, this book is an invaluable up-to-the-minute reference source which provides the reader with a good understanding of RTM and its possible uses, especially for high-performance applications. *Resin Transfer Moulding for Aerospace Structures* is an ideal guide for those in the aerospace and related industries who want to understand and utilize RTM, as well as those directly involved in the RTM industry. *Bibliography on Fibers and Composite*
