Topics In Theoretical Physics - Proceedings Of The Second Pacific Winter For Theoretical Physics Yongmin Cho,1997-04-01 Recently exciting new notions have been emerging in theoretical physics The quantum nature of gravitation revealed in the physics of black holes exotic excitations obeying fractional statistics and integrable structure such as Yangian symmetry in low dimensional models are some of the subjects presented in this volume The spectrum of the talks at the School reflected in the proceedings is a wide one ranging from the phenomenology of particle physics to that of condensed matter physics to topics of a mathematical nature This is an indication that there is a robust interplay of ideas from diverse disciplines of theoretical physics in the Asia Pacific region

Physics of Long-range Interacting Systems Alessandro Campa,Thierry Dauxois,Duccio Fanelli,Stefano Ruffo,2014 This book deals with an important class of many body systems those where the interaction potential decays slowly for large inter particle distances in particular systems where the decay is slower than the inverse inter particle distance raised to the dimension of the embedding space Gravitational and Coulomb

interactions are the most prominent examples however it has become clear that long range interactions are more common than previously thought A satisfactory understanding of properties generally considered as oddities only a couple of decades ago has now been reached ensemble inequivalence negative specific heat negative susceptibility ergodicity breaking out of equilibrium quasi stationary states anomalous diffusion The book intended for Master and PhD students tries to gradually acquaint the reader with the subject The first two parts describe the theoretical and computational instruments needed to address the study of both equilibrium and dynamical properties of systems subject to long range forces The third part of the book is devoted to applications of such techniques to the most relevant examples of long range systems *Dynamics and Thermodynamics of Systems with Long Range Interactions* Thierry Dauxois,Stefano Ruffo,Ennio Arimondo,Martin Wilkens,2008-01-11 Properties of systems with long range interactions are still poorly understood despite being of importance in most areas of physics The present volume introduces and reviews the effort of constructing a coherent thermodynamic treatment of such systems by combining tools from statistical mechanics with concepts and methods from dynamical systems Analogies and differences between various systems are examined by considering a large range of applications with emphasis on Bose Einstein condensates Written as a set of tutorial reviews the book will be useful for both the experienced researcher as well as the nonexpert scientist or postgraduate student
