benefit from the application of a methodology which is composed of a set of models a method manipulating these models and the tools implementing the method Therefore we define a design space based method that is supported by model to model colored transformations in order to obtain MM UIs of information systems The design space is composed of explicitly defined design options that clarify the development process in a structured way in order to require less design effort The feasibility of the methodology is demonstrated through three case studies with different levels of complexity and coverage In addition an empirical study is conducted with end users in order to measure the relative usability level provided by different design decisions
