Relating Humanities and Social Thought Abraham Edel, 2019-01-22 In the current atmosphere of controversy about modes of interpreting literature historical influences in science and subtle ideologies in social theory Abraham Edel confronts the institutionalized separation of the humanities and the sciences the segregation of disciplines through structures that rest on entrenched dualisms and the isolations reenforced by habits of the academy and its struggles over turf Edel s search for connections carried out not only theoretically but through a series of particular studies spanning major disciplines from philosophy and social theory to jurisprudence biography and cultural anthropology leads into uncharted waters He faces the startling conclusion that the clue to answering internal questions characteristically turns out to come from trans discipline relations This fourth volume of Edel s Science Ideology and Value focuses in a Deweyan vein on the functional requirements at the base of the social sciences and humanities alike discipline structures are subject to change development and decay and even to categorial shifts as well as to readjustments At the same time Edel s philosophical naturalism helps diagnose the obstacles to research that stem from imposed dualisms such as theory and practice subjectivity and objectivity fact and value individual and society as well as social contrasts of elite and mass Normative structures are to be held responsible to inquiry and a self conscious exploratory practice is needed to minimize the risks of arbitrary closures For those who wish to get beyond sloganeering in the world of education humane learning and the social and historical sciences this book is a must

Handbook of Online Learning Kjell Erik Rudestam, Judith Schoenholtz-Read, 2002-02-19 I found the book excellent and read every one of the 450 pages Many of the chapters reflect the Fielding Institute s focus on human and organizational behaviour educational leadership and organizational management The book will be particularly appropriate for readers from a corporate training or business school background though there is much for academics and online educators at all levels and subject areas to learn from this well crafted book There are many books and articles about online learning This is one of the better ones Robin Mason Computers and Education

Technology mediated instruction has taken the university and the corporate sector by storm. As more instructors teach online for a dispersed learning community in both academic and business environments, there is a need for resources that will help them adapt to this new teaching method. Educators who come out of traditional academic institutions tend to use traditional methods when offering courses online, e.g., lectures, textbooks, and readings examinations, rather than attend to small group processes and principles of what the editors of this volume call andragogy. This Handbook goes beyond the mechanics of how to create and direct an online learning experience to consider such a new approach to pedagogy in doing so. The editors' primary purpose is to clarify the conceptual issues that underlie effective online teaching and to offer practical guidance to educators and corporate trainers who plan to teach in a virtual environment. Their central tenet is the adoption of computer networks as the teaching vehicle of the future demands a re-examination of our core beliefs about pedagogy and how students learn. The transfer of a classroom curriculum into cyberspace is deceptively simple, but doing so without an appreciation of the nuances and implications of learning online ignores not only the potential of this medium but the inevitable realities of entering it. Rather than fear the challenges that new technology brings to systems of learning, the editors hope to help instructors embrace it by re-thinking how knowledge is acquired and how educational processes may be optimally designed in a new age of teaching and learning.

Features/Benefits: Part I provides an overview and includes discussion of the unique structural aspects of the electronic learning environment, pedagogical issues, curriculum design, psychological and group dynamics, and ethical issues. Part II examines practical issues associated with implementing courses online, both in the traditional university setting and in professional/corporate training environments. The book draws heavily on personal case examples from The Fielding Graduate Institute's 26 years of teaching in nontraditional distributed learning environments.

moral when businessmen seek to maximize profit by creating goods or services that are of objective value. Traditionally profit maximization has been defended on economic grounds. Profit economists argue incentivizes businessmen to produce goods and services. In this view businessmen do not need to be virtuous as long as they deliver the goods. It challenges the traditional defense of profit maximization arguing that profit maximization is morally ambitious because it requires businessmen to form normative abstractions and to cultivate a virtuous character. In so doing the author also challenges the moral basis of corporate social responsibility. Proponents of CSR argue that businessmen can do good while doing well. This book argues that businessmen already do good by maximizing profit drawing upon the histories of the wheel the refrigerator and the shipping container as well as the biographies of J P Morgan John D Rockefeller and Thomas Edison to demonstrate the role of values in the creation of material goods and the role of the virtues in value creation. The author challenges readers to rethink the relationship between profit value and virtue. **Putting Human Into Human Resources** Mba Ph. D.
