New Engineers Guide To Career Growth And Professional Awareness:

The New Engineer's Guide to Career Growth and Professional Awareness Irving J. Gabelman,1996 Intent on solving the ever emerging problems created by the requirements of society and advancing technology today s engineers tend to lose sight of the important professional governmental and community based activities that can profoundly affect the outcome of their careers This comprehensive introductory text helps illuminate the many socio economic issues that are an integral part of the engineer s life from college to career to retirement

The Engineering Project Gene Moriarty,2010-11 We all live our daily lives surrounded by the products of technology that make what we do simpler faster and more efficient These are benefits we often just take for granted But at the same time as these products disburden us of unwanted tasks that consumed much time and effort in earlier eras many of them also leave us more disengaged from our natural and even human surroundings It is the task of what Gene Moriarty calls focal engineering to create products that will achieve a balance between disburdenment and engagement How much disburdenment will be appropriate while still permitting an engagement that enriches one s life elevates the spirit and calls forth a good life in a convivial society One of his examples of a focally engineered structure is the Golden Gate Bridge which draws people to it enlivens and elevates the human spirit and resonates with the world of its congenial setting Humans bridge and world are in tune These values of engagement enlivenment and resonance are key to the normative approach Moriarty brings to the profession of engineering which traditionally has focused mainly on technical measures of evaluation such as efficiency productivity objectivity and precision These measures while important look at the engineered product in a local and limited sense But from a broader perspective what is locally benign may present serious moral problems undermining social justice environmental sustainability and health and safety of affected parties It is this broader perspective that is championed by focal engineering the subject of Part III of the book which Moriarty contrasts with modern engineering in Part I and pre modern engineering in Part II
