subject patient groups the sample size n gender age intervention interval between the assessments scores at both assessment points and the citation Those studies that reported data on more than two assessment points are indicated by a notation however any data beyond the second assessment are not reported and the interested reader should refer to the original article The tables are arranged alphabetically for the most widely used assessment instruments Those instruments for which there was limited data on practice effects are grouped by domain e g *Practitioner's Guide to Assessing Intelligence and Achievement* Jack A.
