Kathryn C. Lavelle, 2004-10-14 Emerging market stock issuance relative to GDP rose in the late twentieth century to levels that roughly matched that of advanced industrial markets Nonetheless the connection between owning shares of emerging market stock and the ability to influence the management of these firms remains fundamentally different from the analogous institutional connection that has evolved in industrial markets The reasons for the differences in emerging markets are both historical and political in nature That is local equity markets have had the objective of providing for some degree of local ownership and control of large economic entities since the late nineteenth century However local markets have operated under different global political structures since that time ranging from imperialism to world wars to sovereign developmental states to neo liberal states Shares issued under these different structures have been reconfigured over time resulting in a lack of convergence along either the Anglo American or Continental models of corporate governance The author uses a political science paradigm to explain the growth of emerging equity markets She departs from conventional economic

explanations and examines politics at the micro level of large issues of emerging market stock The second half of the book presents case studies dealing with emerging market countries in Latin America Asia Russia and Eastern Europe Africa and the Middle East The case studies connect the regional state and firm levels to detail the multiple ownership and control arrangements and to dispel the notion that mere quantitative growth of these markets will lead to a convergence in financial institutional structures along the lines of the industrial core of the world economy

Money and Banks in the American Political System Kathryn C. Lavelle, 2013-01-14 Lavelle argues that the political sources of instability in finance derive from the intersection of market innovation and regulatory arbitrage **Federal Banking in Brazil** Kurt e von Mettenheim, 2015-10-06 This study is the first in a decade to provide an overview of banking in Brazil It is argued that the big three federal banks have long provided essential policy alternatives and since the liberalization of the industry in the 1990s have realized competitive advantages over private and foreign banks **US-Asia Economic Relations** Justin Robertson, 2008-09-02 In a world of continuing financial volatility this book critically evaluates the oft cited claim that US firms and the US government attempt to open emerging markets in economic distress and acquire valuable industrial and financial assets Focusing particularly on Korea and Thailand the author examines the degree of market opening the roles US actors played in this process and the level of foreign firm activity in the years after the Asian crisis Justin Robertson finds surprisingly little coherence between the strategies of US firms and US policy makers At the same time the book downplays European investments concluding instead that the decade since the Asian crisis has reaffirmed strengths of US capital particularly in some of the most important sectors of the global economy Investment banking private equity and subcontracting are significant new features of US Asia economic relations Providing a sophisticated understanding of US interests in Asia especially in terms of the politics of finance capital and including a wealth of empirical data on the US and Asian political economies this book will be invaluable for students and scholars of

Lake, 2013-04-15 The Great Recession and its aftershocks including the Eurozone banking and debt crisis add up to the worst global economic crisis since the Great Depression of the 1930s Although economic explanations for the Great Recession have proliferated the

political causes and consequences of the crisis have received less systematic attention Politics in the New Hard Times is the first book to focus on the Great Recession as a political crisis one with both political sources and political consequences The authors examine variation in crises over time and across countries rather than treating these events as undifferentiated shocks Chapters also explore how crisis has forced the redefinition and reinforcement of interests at the level of individual attitudes and in national political coalitions Throughout the authors stress that the Great Recession is only the latest in a long history of international economic crises with significant political effects and that it is unlikely to be the last
