

THINGS TO CONSIDER BEFORE A POSTNATAL *exercise*

Wait for a few days after normal delivery to start working out. Ask your doctor for the right time in case of a cesarean or complicated childbirth.

Wear loose clothing and a snug bra that supports your breasts.

You may pump milk or feed your baby before the workout to avoid discomfort from fuller breasts.

Begin with simple exercises targeting major muscle groups such as the stomach and the back muscles.

Do not exercise for too long at a time. You may divide your exercises into multiple several 10-minute sessions per day.

Do not continue working out if you feel pain, and consult your doctor.

Why I chose to write this book

There are many reasons for me choosing to write a manual on pre and post natal exercise. It is not a topic which generally befits a male personal trainer, especially from a bodybuilding background. But over the past 4 years or so I have noticed distinct flaws in the information being given out to mothers when returning to work or more rather the lack of information being given. This book will provide the information needed in an easy to use format with pictures for demonstration. All of the exercises and techniques detailed within this book have been tried and tested and are currently being used by clinicians and physical trainers as pre and post natal treatment for women. I have used the exact same techniques for my own wife after she gave birth to our child and she

found them extremely beneficial as have several personal training clients It is a guide you can try at home or at work Within this guide there are exercises that are pitched at the correct level with appropriate progressions and regressions
