

Pre-Algebra Notes – Unit 10: Measurement, Area, and Volume

Triangles, Quadrilaterals, and Polygons

Syllabus Objectives: (4.6) The student will classify polygons. (4.16) The student will validate conclusions about geometric figures and their properties.

Take this opportunity to review vocabulary and previous knowledge about angle measure for triangles—it is a good place to fill in any gaps in student knowledge. Students should know:

- The sum of the angles measures of any triangle is 180° . This can be shown with a quick demonstration:
 - 1) Draw and label a large triangle as shown.
 - 2) Cut the triangle out.
 - 3) Tear each angle from the triangle and place them so their vertices meet at a point.

4) The angles form a straight line: 180° .

- acute triangle—3 acute angles
- right triangle—1 right angle
- obtuse triangle—1 obtuse angle
- equiangular triangle—3 congruent angles
- equilateral triangle—3 congruent sides
- isosceles triangle—at least 2 congruent sides
- scalene triangle—no congruent sides

A tree diagram could also be used to show the relationships.
