Project Planning, Scheduling, and Control in Construction Calin M. Popescu, Chotchai Charoenngam, 1995-03-20 Critical Path Method CPM and Performance Evaluation and Review Technique PERT are widely recognized as the most effective methods of keeping large complex construction projects on schedule under budget and up to professional standards But these methods remain underused because they are poorly understood and due to a host of unfamiliar terms and applications may seem more complicated than they really are This encyclopedia brings together in one comprehensive volume all terms definitions and applications related to the time and cost management of construction projects While many of these terms refer to ancient and venerable building practices others have evolved quite recently and refer specifically to modern construction and management techniques Sources include hundreds of professional books trade journals and research publications as well as planning and scheduling software vendor literature The detailed glossary of all applicable terms includes across referenced listing of examples that describe real world applications for each term supplied An extensive bibliography covers all applicable books articles and periodicals available on project planning scheduling and control using CPM and related subjects This book is an important quick reference and desktop information resource for construction planners schedulers and controllers as well as civil engineers and project managers It is also the ultimate research tool for educators students or anyone who seeks to improve their understanding of the management of modern construction projects

Planning and Analysis of Construction Operations Daniel W. Halpin, Leland S. Riggs, 1992-04-16 Focuses on the use of simulation techniques to model and evaluate repetitive construction operations Based on the CYCLONE and

MICROCYCLONE software developed by the authors and used at 38 universities nationwide it uses a variety of examples from all areas of construction to demonstrate the application of simulation to analyze construction operations
