Predators Of The Wild Cheetah And Leopard:

Cheetah & Leopard - Predators of the Wild Time Life Video, **Reintroduction of Top-Order Predators** Matt W. Hayward, Michael Somers, 2009-04-13 Large predators are among the most threatened species on the planet and ways of conserving them in the face of increasing human populations and associated resource requirements are becoming critical. This book draws upon the experiences of some of the world's foremost large carnivore specialists to discuss the numerous issues associated with reintroducing large predators back into their natural habitats. Reviews of internationally renowned reintroduction programs for wolves, European lynx and African wild dog reveal the successes and failures of these actions. Experts on tigers, snow leopards and jaguars contend that there are other conservation options of higher priority that will ensure their security in the long term. Other experts discuss more theoretical aspects such as whether we know enough about these species to be able to predict their behavioural or ecological response to the reintroduction process. Social, economic, political and genetic considerations are also addressed.

Cattle, Their Predators and Geomatics Research Michael O'Neal Campbell, 2025-08-06 Cattle are currently the most important domesticated mammals with populations numbering in the hundreds of millions and occupying large tracts of land while the conservation of large mammalian carnivores is becoming a dominant discourse in modern geopolitics, also claiming large portions of the Earth's land surface. Computer-based surveying and communication systems including geomatics, Big Data and Big Tech are becoming an essential part of human communication and environmental assessments and are critical to large-scale assessments of land conflicts. A current, critical but neglected issue concerns the measurement of the interfaces of large carnivore and cattle ecologies in a cross-continental format. This book offers a novel approach to the interfaces of the sciences of conservation biology, animal ecology, agricultural development and geomatics, which are increasingly interconnected in modern global development scenarios. For animal ecology and conservation biology, it is about the management systems that have developed from ecological and human parameters. For agricultural development, topics concern ancestral development, physiological characteristics, ecological requirements and predation opportunities and conflicts of cattle breeds. For geomatics, the topics concern the image-based and survey-based technologies that enable more critical environmental assessments. The book takes a novel approach by examining the ancestry of cattle, including the aurochs and current wild buffalos, gaur, banteng, yaks, bison, the process of domestication into taurine and indicine cattle, the semi-domestication of yaks and water buffalo, the ecologies of ancestral and modern large carnivores including bears, big cats and canids, and how the requirements of these large charismatic mammals conflict with the requirements of cattle and agricultural development in Asia, Europe, Africa, North America and South America. This integrative approach contributes to the interests of academic researchers, students, practitioners and policy makers and general readers.

The Biology of African Savannahs Bryan Shorrocks, William Bates, 2015 Savannah habitats comprise an ecologically important but ultimately fragile ecosystem They constitute one of the largest biomes on Earth covering almost 20% of the land surface and can be simply described as tropical and subtropical grasslands with scattered bushes and trees Most savannahs occur in Africa although smaller areas can be found in South America India and Australia They form a rich mosaic of diverse ecosystems and this book offers a concise but comprehensive introduction to their ecology biodiversity and conservation The Biology of African Savannahs describes the major plants grasses and trees such as Acacia and animals mainly large mammals that live in this habitat and examines the biological and ecological factors that influence their population size interactions such as predation and community composition Conservation issues such as climate change hunting and conflict between wildlife and domestic animals are also discussed This new edition has been updated throughout with the latest research in the field and contains new technique boxes which introduce readers to some of the analytical methods used to study African savannahs This accessible text is suitable for both senior undergraduate and graduate students taking courses in savannah and tropical ecology as part of a wider ecology and or conservation biology degree programme It will also be of relevance and use to the many professional ecologists and conservation practitioners requiring a concise but authoritative overview of the topic **The Biology and Conservation of Wild Felids** David Whyte Macdonald, Andrew J. Biogeography and Ecology of Southern Africa Marinus J.A. Werger,A.C. van Bruggen,2012-12-06 Southern Africa is certainly not a naturally bounded area so that there are several possibilities for delineating it and concepts about its extent Wellington discussed the various possibilities for delineation and suggested that one line stands out more clearly and definitely as a physical boundary than any other namely the South Equatorial Divide the watershed between the Zaïre Cuanza and Rufiji Rivers on the one hand and the Zambezi Cunene and Rovuma Rivers on the other This South Equatorial Divide is indeed a major line of separation for some organisms and is also applicable in a certain geographical sense though it does not possess the slightest significance for many other groups of organisms ecosystems or geographical and physical features of Africa The placing of the northern boundary of southern Africa differs in fact strongly per scientific discipline and is also influenced by practical considerations regarding the possibilities of scientific work as subordinate to certain political realities and historically grown traditions This is illustrated for example in such works as the Flora of Southern Africa where the northern boundary of the area is conceived as the northern and eastern political boundaries of South West Africa South Africa and Swaziland Botswana traditionally included in the area covered by the Flora Zambesiaca thus forms a large wedge in Southern Africa Meat-eating & Human Evolution Craig Britton Stanford, Henry T.
