*Predicative Forms in Natural Language and in Lexical Knowledge Bases* P. Saint-Dizier,1999 This book presents by means of a number of articles a survey and a set of projects in computational lexical semantics The most crucial aspects of ongoing research on predicates are presented verb semantic classifications relations between syntax and semantics Wordnet for Verbs multilinguism lexical knowledge bases and lexical acquisition the generative lexicon Predicative Forms in Natural Language and in Lexical Knowledge Bases is designed for professors researchers and graduate students in the area of language processing and semantics **Predicative Forms in Natural Language and in Lexical Knowledge Bases** P. Saint-Dizier,2014-01-15 **PREDICATIVE FORMS IN NATURAL LANGUAGE AND IN LEXICAL KNOWLEDGE BASES** ,1996 **Predicative Forms in Natural Language and in Lexical Knowledge Bases** P. Saint-Dizier,2013-03-09 This volume is a selection of papers presented at a workshop entitled Predicative Forms in Natural Language and in Lexical Knowledge Bases organized in Toulouse in August 1996 A predicate is a named relation that exists among one or more arguments In natural language predicates are realized as verbs prepositions nouns and adjectives to cite the most frequent ones Research on the identification organization and semantic representa tion of predicates in artificial intelligence and in language processing is a very active research field The emergence of new paradigms in theoretical language processing the definition of new problems and the important evol ution of applications have in fact stimulated much interest and debate on the role and nature of predicates in naturallangage From a broad theoret ical perspective the notion of predicate is central to research on the syntax semantics interface the generative lexicon the definition of ontology based semantic representations and the formation of verb semantic classes From a computational perspective the notion of predicate plays a cent ral role in a number of applications including the design of lexical knowledge bases the development of automatic indexing systems for the extraction of structured semantic representations and the creation of interlingual forms in machine translation

*Universality of semantic frames and language specific Bulgarian data* Svetla Koeva,2025-06-20 The book Universality of semantic frames and language specific Bulgarian data is devoted to the principles of data organisation in the Bulgarian FrameNet which has been in development for more than 20 years and has gone through various phases Originally it was developed as an independent resource but for about fifteen years it has been correlated with the Berkeley FrameNet observing the following basic principles The information in the FrameNet that is relevant for the description of Bulgarian is considered language independent e g definition of frames and relations between them definitions of frames and elements and relations between them etc and is automatically transferred into a structure called a superframe For each superframe there

may be one or more Bulgarian frames in which the language independent information is restructured if necessary so that it corresponds exactly to the description for the Bulgarian language The Bulgarian verbs of communication change movement contact and emotion are described in more detail their subclasses are delineated and the similarities and differences in the semantic and syntactic description for Bulgarian and English are compared and discussed It is shown how the semantic frames can be used in an experiment to assess children s mastery of semantic conceptualisation and syntactic use of verbs from their basic vocabulary These and a number of other applications automatic assignment of semantic roles automatic recognition of events in news automatic recognition of scenes in images and videos are some of the applications in which the Bulgarian FrameNet can be used In addition the semantic and syntactic information in the Bulgarian FrameNet can be used for theoretical considerations including comparative studies focussing on the modern state of the Bulgarian language and other languages for which a FrameNet has been developed **Semantic Computing** Phillip C.-Y. Sheu,Heather Yu,C. V. Ramamoorthy,Arvind K. Joshi,Lotfi A. Zadeh,2011-07-05 Presents the state of the technology and points to future directions for semantic computing Semantic computing a rapidly evolving interdisciplinary field seeks to structure design and manipulate computer content to better satisfy the needs and intentions of users and create a more meaningful user experience This remarkable contributed work examines the art engineering technology and applications of the field Moreover it brings together researchers from such disciplines as natural language processing software engineering multimedia semantics semantic Web signal processing and pattern recognition in order to provide a single source that presents the state of the technology and points to new breakthroughs on the horizon Semantic Computing begins with an introduction that explores the concepts technology applications and future of semantic computing Next the book is divided into four parts Part One Semantic Analysis Part Two Semantic Languages and Integration Part Three Semantic Applications Part Four Semantic Programming and Interface As readers progress through the book they ll learn not only the underlying science but also the fundamental technological building blocks of semantic computing Moreover they ll discover a variety of cross disciplinary solutions to current computing and communication problems Throughout the book references to the primary literature enable further investigation of each individual topic Semantic Computing is ideal for industrial managers researchers and engineers seeking to design the next generation of computing systems in order to better meet user needs It is also recommended as a textbook for senior undergraduate and graduate level semantic computing courses **Cognitive Linguistics and Lexical Change** Natalya I. Stolova,2015-03-27 This monograph offers the first in depth lexical and semantic analysis of motion verbs in their development from Latin to nine Romance languages Spanish French Italian Portuguese Romanian Catalan Occitan Sardinian and Raeto Romance demonstrating that the patterns of innovation and continuity attested in the data can be accounted for in cognitive linguistic terms At the same time the study illustrates how the insights gained from Latin and Romance historical data have profound implications for the cognitive approaches to

language in particular for Leonard Talmy s motion framing typology and George Lakoff and Mark Johnson s conceptual metaphor theory The book should appeal to scholars interested in historical Romance linguistics cognitive linguistics and lexical change **Enriched Composition and Inference in the Argument Structure of Chinese** Ren Zhang,2005-10-20 As with many other languages Mandarin Chinese exhibits a rich variety of ways in expressing the arguments of the predicator in a sentence Unlike other languages such variation is typically devoid of any formal marking Previous attempts in explaining such phenomena usually focus on the syntax as an explanatory tool This book argues that a large majority of such argument structure phenomena are better accounted for by recourse to enriched representations in lexical semantics Drawing insights from conceptual semantics cognitive semantics Generative Lexicon construction grammar and formal syntax this book constitutes the first attempt at a comprehensive account of lexical semantic issues in Mandarin Chinese

**Aspectual Inquiries** Paula Kempchinsky,Roumyana Slabakova,2005-02-14 The study of the linguistic reflexes of aspect has been an active field of research in various sub disciplines of linguistics such as syntax semantics including discourse theory and acquisition studies However communication and dissemination of results across these various subfields has often been indirect This volume solves that problem The different angles brought together here give us a comprehensive picture of the representation of aspect in the mind brain of the speaker The papers in this volume represent the results of a workshop on the syntax semantics and acquisition of aspect held in 2002 whose purpose was to foment active cross disciplinary communication A number of the papers examine the syntactic representation of lexical or situation aspect while others focus on the syntactic interaction of lexical aspect with grammatical aspect and of grammatical aspect and tense Other papers examine the role of aspect in discourse representations while a third group of papers reports on results of empirical studies on the acquisition of aspect in both first and second language acquisition and patterns of loss of morphosyntactic reflexes of aspect in language attrition This volume is of interest to researchers and advanced graduate students in syntax semantics discourse representation and language acquisition particularly those working on tense and aspect **Treebanks** A. Abeillé,2003-09-30 This book provides a state of the art on work being done with parsed corpora It gathers 21 papers on building and using parsed corpora raising many relevant questions and deals with a variety of languages and a variety of corpora It is for those working in linguistics computational linguistics natural language syntax and grammar Text Genres and Registers: The Computation of Linguistic Features Chengyu Alex Fang,Jing Cao,2015-02-05 This book is a description of some of the most recent advances in text classification as part of a concerted effort to achieve computer understanding of human language In particular it addresses state of the art developments in the computation of higher level linguistic features ranging from etymology to grammar and syntax for the practical task of text classification according to genres registers and subject domains Serving as a bridge between computational methods and sophisticated linguistic analysis this book will be of particular interest to academics and students of computational linguistics as well as professionals in natural language

engineering **Prosody: Theory and Experiment** M. Horne,2013-03-14 The study of prosody is perhaps the area of speech research which has undergone the most noticeable development during the past ten to fifteen years As an indication of this one can note for example that at the latest International Conference on Spoken Language Processing in Philadelphia October 1996 there were more sessions devoted to prosody than to any other area Not only that but within other sessions in particular those dealing with dialogue several of the presentations dealt specifically with prosodic aspects of dialogue research Even at the latest Eurospeech meeting in Rhodes September 1997 prosody together with speech recognition where several contributions dealt with how prosodic cues can be exploited to improve recognition processes were the most frequent session topics despite the fact that th ere was a separate ESCA satellite workshop on intonation in conjunction with the main Eurospeech meeting which included over 80 contributions This focus on prosodic research is partly due to the fact that developments in speech technology have made it possible to examine the acoustic parameters associated with prosodic phenomena in particular fundamental frequency and duration to an extent which has not been possible in other domains of speech research It is also due to the fact that significant theoretical advances in linguistics and phonetics have been made during this time which have made it possible to obtain a better understanding of how prosodic parameters function in expressing different kinds of meaning in the languages of the world *New Perspectives on Argument Structure in Functional Grammar* Ricardo Mairal Usón,María Jesús Pérez Quintero,2015-04-28 The present monograph deals with lexical representation and linking within the framework of Functional Grammar The notion of predicate frame as originally proposed in 1978 and subsequent refinements of the theory are challenged in that a new format of representing argument taking properties is formulated This new format opens new lines of research towards the design of a new linking algorithm in Functional Grammar *Lexical Semantics and Knowledge Representation in Multilingual Text Generation* Manfred Stede,2012-12-06 In knowledge based natural language generation issues of formal knowledge representation meet with the linguistic problems of choosing the most appropriate verbalization in a particular situation of utterance Lexical Semantics and Knowledge Representation in Multilingual Text Generation presents a new approach to systematically linking the realms of lexical semantics and knowledge represented in a description logic For language generation from such abstract representations lexicalization is taken as the central step when choosing words that cover the various parts of the content representation the principal decisions on conveying the intended meaning are made A preference mechanism is used to construct the utterance that is best tailored to parameters representing the context Lexical Semantics and Knowledge Representation in Multilingual Text Generation develops the means for systematically deriving a set of paraphrases from the same underlying representation with the emphasis on events and verb meaning Furthermore the same mapping mechanism is used to achieve multilingual generation English and German output are produced in parallel on the basis of an adequate division between language neutral and language specific lexical and grammatical knowledge Lexical Semantics and

Knowledge Representation in Multilingual Text Generation provides detailed insights into designing the representations and organizing the generation process Readers with a background in artificial intelligence cognitive science knowledge representation linguistics or natural language processing will find a model of language production that can be adapted to a variety of purposes The Cambridge Handbook of Korean Linguistics Sungdai Cho,John Whitman,2022-08-25 The Korean wave in music and film and Korea s rise to become the twelfth economic power in the world have boosted the world wide popularity of Korean language study The linguistic study of Korean with its rich syntactic and phonological structure complex writing system and unique socio historical context is now a rapidly growing research area Contributions from internationally renowned experts on the language provide a state of the art overview of key current research in Korean language and linguistics Chapters are divided into five thematic areas phonetics and phonology morphology and syntax semantics and pragmatics sociolinguistics and psycholinguistics and language pedagogy The Handbook includes cross linguistic data to illuminate the features of Korean and examples in Korean script making it suitable for advanced students and researchers with or without prior knowledge of Korean linguistics It is an essential resource for students and researchers wishing to explore the exciting and rapidly moving field of Korean linguistics **Granularity in the Verbalization of Events and Objects** Katerina Stathi,2023-08-15 The study departs from the observation that in expressing ideas some languages encode more details than others It investigates whether languages encode events and or objects at a coarse grained e g put glass as opposed to a fine grained e g lay wine glass level systematically The level of detail is termed granularity which is viewed as a cline from fine grained semantic specificity to coarse grained meaning semantic generality Four languages are investigated German English Greek and Turkish The study draws on elicited data from a naming task The verbalization of events is based on event and object descriptions in selected semantic domains The results reveal significant granularity effects between languages and language types satellite framed vs verb framed The study is relevant for scholars interested in linguistic typology lexical and semantic typology contrastive linguistics event representation psycholinguistics and cognitive semantics

Envisioning Machine Translation in the Information Future John S. White,2003-07-31 Envisioning Machine Translation in the Information Future When the organizing committee of AMTA 2000 began planning it was in that brief moment in history when we were absorbed in contemplation of the passing of the century and the millennium Nearly everyone was comparing lists of the most important accomplishments and people of the last 10 100 or 1000 years imagining the radical changes likely over just the next few years and at least mildly anxious about the potential Y2K apocalypse The millennial theme for the conference Envisioning MT in the Information Future arose from this period The year 2000 has now come and nothing terrible has happened yet to our electronic infrastructure Our musings about great people and events probably did not ennoble us much and whatever sense of jubilee we held has since dissipated So it may seem a bit obsolete or anachronistic to cast this AMTA conference into visionary themes Epistemic Modalities and Evidentiality in Cross-Linguistic Perspective

Zlatka Guentchéva,2018-04-09 This volume explores phenomena which come under the heading of epistemic modalities and evidentiality in more or less well known languages Germanic Romance Balto Slavic Hungarian Tibetan Lakandon and Yucatec Maya Arwak Chibchan Kogi and Ika It reveals cross linguistic variations in the structuring of these vast fields of enquiry and clearly demonstrates the relevance and interplay of multiple factors involved in the analysis of these two conceptual domains Although the contributions present diverging descriptive traditions they are nonetheless within the broad domain of functional typological linguistics and give access to distinct yet comparable approaches They all converge around a number of key issues modal verbs the relationship between epistemic modality and evidentiality the relationship of modal notions with some tense and aspect notions the notions of inter subjectivity commitment and dis engagement the prosodic variation of modal adverbs the diachronic connections between negation and evidential markers the connection with mirativity The volume is of interest to linguists and advanced graduate students working in general and theoretical linguistics semantics pragmatics cognition and typology
