Therapy of Renal Diseases and Related Disorders Wadi N. Suki, Shaul G. Massry, 2012-12-06. Where are all these kidney patients coming from? A few years ago we had never heard of kidney disease and now practical kidney function tests and the natural history of a number of kidney diseases including glomerulonephritis are speaking of patients in the hundreds of thousands and indeed potentially millions. My reply not meant to William Goldring, Herbert Chasis, Dana Atchley and others who studied the effects of hypertension, endocarditis, beriberi was from the cemetery. Sir, this is a summary and circulatory diseases on the kidney and spawned such of some Congressional testimony. Lance gave on behalf of extending kidney disease under Medicare. The Kidney in Pregnancy V.E. Andreucci, 2012-12-06. The behavior of the kidney in normal pregnancy as well as in complicated pregnancy is a very interesting but still in many ways an unknown topic in renal medicine. It is undoubtedly difficult to determine even in normal women the behavior of renal hemodynamics throughout gestation since the fear of impairing a new life i.e. the fetus's life will limit for ethical reasons the use or the frequent repetition of diagnostic tests on the mother. On the other hand the

study of complicated pregnancy even for diagnostic purposes for planning adequate treatment except in a few countries that are known for the advanced health education of the population has to face serious difficulties First of all pregnant women usually seek the help of an obstetrician when gestation is already in an advanced stage This makes it difficult to determine when and how asymptomatic signs of any disease discovered during pregnancy have first occurred A second difficulty is that frequently the patient does not know whether a given disease has preceded pregnancy Pregnancy is a condition of young women and a young woman frequently has never seen a physician thus no urine analysis or blood tests have been performed before the gestation Not infrequently even blood pressure has never been measured This will make it difficult to classify hypertension discovered in late pregnancy as pregnancy induced hypertension or as chronic hypertension in pregnancy
