**Prematurity in Scientific Discovery** Ernest B. Hook, 2002-10-02 In preparing this remarkable book Ernest Hook persuaded an eminent group of scientists historians sociologists and philosophers to focus on the problem why are some discoveries rejected at a particular time but later seen to be valid The interaction of these experts did not produce agreement on prematurity in science but something more valuable a collection of fascinating papers many of them based on new research and analysis which sometimes forced the author to revise a previously held opinion The book should be enthusiastically welcomed by all readers who are interested in how science works Stephen G Brush co author of *Physics The Human Adventure From copernicus to Einstein and Beyond* Prematurity and Scientific Discovery contains interesting and insightful papers by numerous well known scientists and scholars It will be of wide interest not only to science studies scholars but also to working scientists and to science literate general readers Thomas Nickles editor of *Scientific Discovery Logic and Rationality* *Thinking about Science* Ferric C. Fang, Arturo Casadevall, 2023-10-09 Thinking about Science Good Science Bad Science and How to Make It Better A riveting exploration of the world of science diving headfirst into its triumphs and tribulations Penned by seasoned microbiologists Ferric C Fang and Arturo Casadevall this book offers a comprehensive analysis of the scientific enterprise through various lenses including historical philosophical and personal From their unique vantage points as researchers clinicians and educators Fang and Casadevall dissect the intricate mechanisms of science shedding light on its strengths and weaknesses Through engaging historical anecdotes personal narratives and insightful academic studies they present a candid evaluation of science s performance including a thought provoking examination of its role during the COVID 19 pandemic A must read for anyone curious about the present predicaments and future potential of science Thinking about Science Good Science Bad Science and How to Make It Better is more than just a book it s a roadmap to understanding and improving the scientific endeavor for the benefit of society at large The authors have given us a thoughtful description of science and the joy of discovery an unflinching diagnosis of where improvements are needed and recommendations for remedies well worth considering Scientists science and society would benefit if this book were read by both future and established scientists as well as the administrators policymakers and regulators who are in a position to help us do better Michael Kalichman UC San Diego With a deep understanding of the profound impact of science on society the authors provide thought provoking perspectives on changes in the scientific enterprise that will support sustainable equitable practices and engender public trust An engaging read for everyone with an interest in science or science policy Stanley Maloy San Diego State University **The Sasquatch Paradox** Levi Machovec, 2022-02-10 There is a problem in the scientific community They are more than happy to debate those who believe the Earth is flat Yet when one brings up Sasquatch they quickly ignore the subject and shun anyone in the scientific community who does look into the evidence The Sasquatch paradox shows that the scientific community does not live up to

its ideal We should not be surprised at this fact as this has been the case since the scientific revolution And so the question remains and the scientists still haven't provided an adequate answer to this one fundamental question What is leaving ape footprints in the woods of North America

**History, Theory and Philosophy in Archaeology** Tim Murray, 2025-02-03 This collection of essays the bulk of which have been previously published by Emeritus Professor Tim Murray ranges widely across contemporary archaeological theory and the history of archaeology while retaining a focus on the archaeology of Australia The collection is introduced by a new essay The evolution of archaeological theory that sets the agenda for the collection In doing this Murray explores the critical intersection between archaeology philosophy and the social and cultural context of its practice in Australia and elsewhere The collection brings together ideas about time scale and strategies for the evaluation of archaeological concepts and categories which are then applied to an understanding of significant issues raised by writing the archaeology of Australia from the Pleistocene to the present The essays have been drawn from over 30 years of research and writing about archaeological inquiry into the theories and methods of the discipline and will be of particular interest to archaeologists historians the managers of archaeological heritage and advocates of the importance of indigenous perspectives on the histories of post colonial societies

**International Handbook of Research in History, Philosophy and Science Teaching** Michael R. Matthews, 2014-07-03 This inaugural handbook documents the distinctive research field that utilizes history and philosophy in investigation of theoretical curricular and pedagogical issues in the teaching of science and mathematics It is contributed to by 130 researchers from 30 countries it provides a logically structured fully referenced guide to the ways in which science and mathematics education is informed by the history and philosophy of these disciplines as well as by the philosophy of education more generally The first handbook to cover the field it lays down a much needed marker of progress to date and provides a platform for informed and coherent future analysis and research of the subject The publication comes at a time of heightened worldwide concern over the standard of science and mathematics education attended by fierce debate over how best to reform curricula and enliven student engagement in the subjects There is a growing recognition among educators and policy makers that the learning of science must dovetail with learning about science this handbook is uniquely positioned as a locus for the discussion The handbook features sections on pedagogical theoretical national and biographical research setting the literature of each tradition in its historical context It reminds readers at a crucial juncture that there has been a long and rich tradition of historical and philosophical engagements with science and mathematics teaching and that lessons can be learnt from these engagements for the resolution of current theoretical curricular and pedagogical questions that face teachers and administrators Science educators will be grateful for this unique encyclopaedic handbook Gerald Holton Physics Department Harvard University This handbook gathers the fruits of over thirty years research by a growing international and cosmopolitan community Fabio Bevilacqua Physics Department University of Pavia

**Michael Polanyi and His Generation** Mary Jo Nye, 2011-09-16 In Michael Polanyi and His

Generation Mary Jo Nye investigates the role that Michael Polanyi and several of his contemporaries played in the emergence of the social turn in the philosophy of science. This turn involved seeing science as a socially based enterprise that does not rely on empiricism and reason alone but on social communities, behavioral norms, and personal commitments. Nye argues that the roots of the social turn are to be found in the scientific culture and political events of Europe in the 1930s when scientific intellectuals struggled to defend the universal status of scientific knowledge and to justify public support for science in an era of economic catastrophe, Stalinism, and Fascism, and increased demands for applications of science to industry and social welfare. At the center of this struggle was Polanyi, who Nye contends was one of the first advocates of this new conception of science. Nye reconstructs Polanyi's scientific and political milieus in Budapest, Berlin, and Manchester from the 1910s to the 1950s and explains how he and other natural scientists and social scientists of his generation, including J. D. Bernal, Ludwik Fleck, Karl Mannheim, and Robert K. Merton, and the next such as Thomas Kuhn, forged a politically charged philosophy of science, one that newly emphasized the social construction of science.

**Rethinking Scientific Change and Theory Comparison:** Léna Soler, H. Sankey, Paul Hoyningen-Huene, 2008-05-29. L. NA SOLER. This volume is a collection of essays devoted to the analysis of scientific change and stability. It represents the most recent thinking on the topic of incommensurability and scientific theory change. It explores the balance and tension that exists between commensurability and continuity, on the one hand, and incommensurability and discontinuity or ruptures, on the other. And it discusses some central epistemological consequences regarding the nature of scientific progress, rationality, and realism. With respect to these topics, it investigates a number of new avenues and revisits some familiar issues with a focus on the history and philosophy of physics in a way that is informed by developments in cognitive sciences as well as the claims of New experimentalists. The essays in this book are fully revised versions of papers which were originally presented at the international colloquium *Repenser l'évaluation comparative des théories scientifiques: stabilité, ruptures, incommensurabilités*, organized by Léna Soler and Paul Hoyningen-Huene at the University of Nancy, France, in June 2004. Each paper is followed by a critical comment which either represents an opposing viewpoint or suggests some developments. The conference was a striking example of the sort of genuine dialogue that can take place between philosophers of science, historians of science, and scientists who come from different traditions and endorse opposing commitments. I hope that this is evident in the book too, and that it will constitute one of its attractions.

**Evolutionary Bioinformatics** Donald R. Forsdyke, 2016-04-27. Now in its third edition and supplemented with more online material, this book aims to make the new information-based rather than gene-based bioinformatics intelligible both to the bio people and the info people. Books on bioinformatics have traditionally served gene hunters and biologists who wish to construct family trees showing tidy lines of descent. While dealing extensively with the exciting topics of gene discovery and database searching, such books have hardly considered genomes as information channels through which multiple forms and levels of information have passed through the generations. This new

bioinformatics contrasts with the old gene based bioinformatics that so preoccupies previous texts. Forms of information that we are familiar with, mental textual, are related to forms with which we are less familiar, hereditary. The book extends a line of evolutionary thought that leads from the nineteenth century Darwin, Butler, Romanes, Bateson through the twentieth Goldschmidt, White and into the twenty first, the final works of the late Stephen Jay Gould. Long an area of controversy, diverging views may now be reconciled.

**The Efficiency Paradox** Edward Tenner, 2018-04-17. A skillful and lucid *The Wall Street Journal* way of thinking about efficiency, challenging our obsession with it and offering a new understanding of how to benefit from the powerful potential of serendipity. Algorithms, multitasking, the sharing economy, life hacks: our culture can't get enough of efficiency. One of the great promises of the Internet and big data revolutions is the idea that we can improve the processes and routines of our work and personal lives to get more done in less time than we ever have before. There is no doubt that we're performing at higher levels and moving at unprecedented speed, but what if we're headed in the wrong direction? Melding the long term history of technology with the latest headlines and findings of computer science and social science, *The Efficiency Paradox* questions our ingrained assumptions about efficiency, persuasively showing how relying on the algorithms of digital platforms can in fact lead to wasted efforts, missed opportunities, and above all, an inability to break out of established patterns. Edward Tenner reveals what we and our institutions, when equipped with an astute combination of artificial intelligence and trained intuition, can learn from the random and unexpected.

[Collaborative Couples in the Sciences](#) Annette Lykknes, Donald L. Opitz, Brigitte Van Tiggelen, 2012-06-05. In this volume a distinguished set of international scholars examine the nature of collaboration between life partners in the sciences, with particular attention to the ways in which personal and professional dynamics can foster or inhibit scientific practice. Breaking from traditional gender analyses which focus on divisions of labor and the assignment of credit, the studies scrutinize collaboration as a variable process between partners living in the nineteenth and twentieth centuries who were married and divorced, heterosexual and homosexual, aristocratic and working class, and politically right and left. The contributors analyze cases shaped by their particular geographical locations, ranging from retreat settings like the English countryside and Woods Hole, Massachusetts to university laboratories and urban centers in Berlin, Stockholm, Geneva, and London. The volume demonstrates how the terms and meanings of collaboration, variably shaped by disciplinary imperatives, cultural mores, and the agency of the collaborators themselves, illuminate critical intellectual and institutional developments in the modern sciences.

*Educational Research: Why 'What Works' Doesn't Work* Paul Smeyers, Marc Depaepe, 2007-01-07. Education and educational research, according to the current fashion, are supposed to be concerned with what works to the exclusion of all other considerations. All over the world, and particularly in the English speaking countries, governments look for means of improving student achievement as measured by standardized test scores. Although such improvements are often to be welcomed, they do not answer all significant questions about what constitutes good education. Also, the research on which

they are based is not the only legitimate way to do educational research Social research and therefore educational research cannot ignore the distinctive nature of what it studies a social activity where questions of meaning and value cannot be eliminated and where interpretation and judgment play a crucial role In this book distinguished philosophers and historians of education from 6 countries focus on the problematical nature of the search for what works in educational contexts in practice as well as in theory Beginning with specific problems they move on to more general and theoretical considerations seeking to go beyond over simple ideas about cause and effect and the rhetoric of performativity that currently has educational thinking in its grip Freedom of inquiry in educational research can no longer be taken for granted Narrow definitions of what constitutes scientific research funding criteria that enforce particular research methods and policy decision processes that ignore any research that is not narrowly utilitarian create a context in many countries that discourages scholarship of a more speculative exploratory or critical sort This book brings together an exceptional combination of international and cross disciplinary scholars who bring the perspectives of history and philosophy of science to ask How did we arrive at this place and Where is educational research heading Thebook illuminates the anti intellectual consequences of a what works mentality in education and shows that the ostensibly scientific revolution in educational research in fact reflects an ahistorical and conceptually muddled understanding of what actually constitutes science This book could not be more timely and important Nicholas C Burbules Grayce Wicall Gauthier Professor University of Illinois With research increasingly tied to State policies with the instrumental purpose of guiding school reforms the volume provides an important historical and philosophical questioning of the possibilities limitations and challenges of education research Internationally leading scholars engage in a significant conversation that is sophisticated and nuanced for understanding contemporary debates Thomas S Popkewitz the University of Wisconsin Madison USA This publication is realized by the Research Community FWO Vlaanderen Research Foundation Flanders Belgium Philosophy and History of the Discipline of Education Evaluation and Evolution of the Criteria for Educational Research Innovation in Science and Organizational Renewal Thomas Heinze,Richard Münch,2016-07-11 This book looks at the types of new research organizations that drive scientific innovation and how ground breaking science transforms research fields and their organization Based on historical case studies and comparative empirical data the book presents new and thought provoking evidence that improves our knowledge and understanding about how new research fields are formed and how research organizations adapt to breakthroughs in science While the book is firmly based in science history it discusses more general sociological and policy propositions regarding scientific innovations and organizational change The volume brings together leading scholars both from the United States and Europe Propaganda in the Helping Professions Eileen Gambrill,2012-02-20 This incisive look at how propaganda has infiltrated the helping professions is essential reading for social workers psychologists and other helping professionals and is an excellent supplement to courses on critical thinking and introduction to practice

**Early Civilization and the American Modern** Eva Miller, 2024-08-05 In the late nineteenth and early twentieth century a particular story about the United States role in the long history of world civilization was constructed in public spaces through public art and popular histories This narrative posited that civilization and its benefits science law writing art and architecture began in Egypt and Mesopotamia before passing ever further westward towards a triumphant culmination on the American continent *Early Civilization and the American Modern* explores how this teleological story answered anxieties about the United States unique role in the long march of progress Eva Miller focuses on important figures who collaborated on the creation of a visual progressive narrative in key institutions world s fairs and popular media Orientalist and public intellectual James Henry Breasted astronomer George Ellery Hale architect Bertram Grosvenor Goodhue and decorative artists Lee Lawrie and Hildreth Meier At a time when new information about the ancient Middle East was emerging through archaeological excavation ancient Egypt and Mesopotamia appeared simultaneously old and new This same period was crucial to the development of public space and civic life across the United States as a shared sense of historical consciousness was actively pursued by politicians philanthropists intellectuals architects and artists [Beyond Einstein](#)

David E. Rowe, Tilman Sauer, Scott A. Walter, 2018-06-18 *Beyond Einstein Perspectives on Geometry Gravitation and Cosmology* explores the rich interplay between mathematical and physical ideas by studying the interactions of major actors and the roles of important research communities over the course of the last century **Women Scientists** Magdolna Hargittai, 2015-03-04 Magdolna Hargittai uses over fifteen years of in depth conversation with female physicists chemists

biomedical researchers and other scientists to form cohesive ideas on the state of the modern female scientist The compilation based on sixty conversations examines unique challenges that women with serious scientific aspirations face In addition to addressing challenges and the unjustifiable underrepresentation of women at the higher levels of academia Hargittai takes a balanced approach by discussing how some of the most successful of these women have managed to obtain professional success and personal happiness Women Scientists portrays scientists from different backgrounds different geographical regions eighteen countries from four continents and leaders from a variety of professional backgrounds including eight Nobel laureate women The book is divided into three sections Husband and Wife Teams Women at the Top and In High Positions Hargittai uses her own experience to introduce her first section on the lives of prominent scientific couples and addresses the joys and disadvantages of husband and wife teams The second section is a comprehensive exploration of the struggles and triumphs of women at the top Hargittai introduces women from countries where relatively little has been written about female scientists The final section focuses on women scientists involved with science administration and leadership Hargittai s biographical sketches role models for budding scientists The book is a much needed account of female presence and influence in the sciences

**Creativity in Science** Dean Keith Simonton, 2004-05-03

Psychologists sociologists philosophers historians and even scientists themselves have often tried to decipher the basis for creativity in science Some have attributed creativity to a special logic the so called scientific method whereas others have pointed to the inspirations of genius or to the inevitable workings of the zeitgeist Finally some have viewed scientific breakthroughs as the product of chance as witnessed in the numerous episodes of serendipity Too often these four alternative interpretations are seen as mutually exclusive Yet the central thesis of this book is that the chance logic genius and zeitgeist perspectives can be integrated into a single coherent theory of creativity in science But for this integration to succeed chance must be elevated to the status of primary cause Logic genius and the zeitgeist still have significant roles to play but mainly operate insofar as they enhance or constrain the operation of a chance combinatorial process
