Rebuilding The Body Organ Transplantation:

Rebuilding the Body Ann Fullick, 2009-01-01 Delves inside the human body to show how our major organs and specialized cells work what happens when they don't and how they can be replaced Publisher **Organ Transplants** Tina P. Schwartz, 2005-04-20 This is a one of a kind book that addresses the issue of what it's like to be involved with an organ transplant procedure It's filled with real life stories of teens whose parents siblings or other family members are transplant recipients as well as teens who have had transplants themselves and includes stories of recipients who have received heart liver kidney pancreas and double lung transplants This book describes the physical and emotional ups and downs that are part of the transplant process It addresses from both the recipient's and family's point of view what it feels like to be placed on the transplant list to wait for an organ to receive false alarm calls to come to the transplant center to finally undergo the transplant operation to recover to deal with setbacks of surgery and organ rejection and to live on anti rejection drugs the rest of one's life Also detailed are the medical financial mental and other preparations that must be undertaken as part of the transplant process Guidance on what to expect how to help where to seek assistance and how to support the patient is also given Answers to the tough practical and emotional questions that teens have about an organ transplant such as will my parent survive the surgery how long will it take for my parent to recover and why is this happening to me are discussed Numerous question and answer sections of frequently asked questions about organ transplants and the myths that surround them are included as well as contact information for organizations that provide many forms of assistance for recipients and their families Through all the serious issues however this book offers much hope and promise for recipients and their families through the stories of those whose lives have been greatly improved through an organ transplant This is the ideal resource for all readers who are interested in the subject of organ donation and transplant including those who are facing a transplant and their family members as well as Cryobiology Cherie Winner, 2006-01-01 Suspended animation the act of freezing a living specimen at extreme temperatures and then thawing it out again in the future is the goal of cryobiology This science is so fantastic that it almost seems like science fiction and yet nature shows that this process is a part of life for many insects and animals Discover how this fascinating process could change the world forever in this compelling look at the future of science **What Are the Limits of Organ Transplants?** Anna Claybourne, 2012 Discusses the process of organ transplantation which organs can be transplanted and cutting edge science in the field **The Political Economy of Organ Transplantation** Hagai Boas, 2022-09-09 This thought provoking work examines how the relationships of organs tissues and cells transferred from one body to another through donation sale or gift are mediated by the state market and family The book is a thorough review of the sociological anthropological and ethical literature surrounding transplant organs but encased within the author's own personal dilemmas and lived experience His work skillfully underscores the negotiations and accommodations inherent in the use of these technologies and reveals the situatedness of decisions that belie any

simplistic readings of the ethics of transplantations This is a stimulating and accessible book for those with an interest in transplantation ethics or the social implications of medical technologies Its strength lies in the reflexive accounts from the author of his own experience juxtaposed with the sensitive appraisals of the workings of the state market and family in the organ economy Andrea Whittaker Monash University reviewed for Social Forces This innovative work combines a rigorous academic analysis of the political economy of organ supply for transplantation with autobiographical narratives that illuminate the complex experience of being an organ recipient Organs for transplantations come from two sources living or post mortem organ donations These sources set different routes of movement from one body to another Postmortem organ donations are mainly sourced and allocated by state agencies while living organ donations are the result of informal relations between donor and recipient Each route traverses different social institutions determines discrete interaction between donor and recipient and is charged with moral meanings that can be competing and contrasting The political economy of organs for transplants is the gamut of these routes and their interconnections and this book suggests how such a political economy looks like what are its features and contours its negotiation of the roles of the state market and the family in procuring organs for transplantations and its ultimate moral justifications Drawing on Boas personal experiences of waiting searching and obtaining organs each autobiographical section of the book sheds light on a different aspect of the discussed political economy of organs post mortem donations parental donation and organ market and illustrates the experience of living with the fear of rejection and the intimidation of chronic shortage A Political Economy of Organ Transplantation is of interest to students and academics with an interest in bioethics sociology of health and illness medical anthropology and science and technology studies

Organ Donation Sarah Boslaugh, 2022-04-01 Offering a comprehensive yet accessible look at organ donation and transplantation this book examines the scientific medical social legal and ethical issues surrounding it Readers will discover how new technologies and medical advances are shaping the future of organ donation Donated organs and tissues have improved or saved the lives of hundreds of thousands of individuals but these life changing procedures also raise many logistical and ethical questions How can organs be effectively allocated to those in need Should individuals be allowed to purchase organs from living donors What role does religion and culture play in someone's decision to donate or accept an organ Will new technologies like bioprinting change the future of organ donation This book answers all these questions and more

Language, Body, and Health Paul McPherron, Vaidehi Ramanathan, 2011-11-30 This edited book addresses ways in which bodies conceived broadly get languaged and ways in which ideas of normalcy and normal bodies are held in place and reproduced The articles show how it is through this medium that people with ailments or unusual bodies get positioned and slotted in certain ways The present volume represents a departure from other works in at least two ways First it brings in discourses around bodies per se into language related research a realm that previous research has not directly engaged Second it ushers in discussions about bodies by critically addressing the language by which experiences around bodily

breakdowns and ailments occur Calling attention to a host of discourses biomedical societal poststructuralist and drawing on a variety of disciplinary perspectives critical theories ethnographically gathered materials and extant data the chapters pierce the general veil of silence that we have collectively drawn regarding how some of our most intimate body dis functions impact our everyday living and sense of normalcy

The Origins of Organ Transplantation Thomas Schlich,2010 This book investigates a crucial but forgotten episode in the history of medicine In it Thomas Schlich systematically documents and analyzes the earliest clinical and experimental organ transplant surgeries In so doing he lays open the historical origins of modern transplantation offering a new and original analysis of its conceptual basis within a broader historical context This first comprehensive account of the birth of modern transplant medicine examines how doctors and scientists between 1880 and 1930 developed the technology and rationale for performing surgical organ replacement within the epistemological and social context of experimental university medicine The clinical application of organ replacement however met with formidable obstacles even as the procedure became more widely recognized Schlich highlights various attempts to overcome these obstacles including immunological explanations and new technologies of immune suppression and documents the changes in surgical technique and research standards that led to the temporary abandonment of organ transplantation by the 1930s Thomas Schlich is professor and Canada Research Chair in the History of Medicine at McGill University

Forensic Science Ann Fullick,2007-10-02 The darkest science gives us the understanding and power to help others in the most direct way possible Did you know that wherever you go and whatever you do you leave traces of your activity behind you And that in the future DNA databases may hold profiles of every individual on the planet So how are new forensic techniques helping in the fight against crime The Science at the Edge series is about developments and theories in science that are both interesting and sometimes cause for concern Each book in the series explains how the science was discovered how it works how it can help people and why it may not be completely accepted by everyone

Artificial Hearts Shelley McKellar,2018-01-01 A comprehensive history of the development of artificial hearts in the United States Artificial hearts are seductive devices Their promissory nature as a cure for heart failure aligned neatly with the twentieth century American medical community s view of the body as an entity of replacement parts In Artificial Hearts Shelley McKellar traces the controversial history of this imperfect technology beginning in the 1950s and leading up to the present day McKellar profiles generations of researchers and devices as she traces the heart s development and clinical use She situates the events of Dr Michael DeBakey and Dr Denton Cooley s professional fall out after the first artificial heart

implant case in 1969 as well as the 1982-83 Jarvik 7 heart implant case of Barney Clark within a larger historical trajectory. She explores how some individuals like former US Vice President Dick Cheney affected the public profile of this technology by choosing to be implanted with artificial hearts. Finally, she explains the varied physical experiences both negative and positive of numerous artificial heart recipients. McKellar argues that desirability rather than the feasibility or practicality of artificial hearts drove the invention of the device. Technical challenges and unsettling clinical experiences produced an ambivalence toward its continued development by many researchers, clinicians, politicians, bioethicists, and the public. But the potential and promise of the artificial heart offset this ambivalence, influencing how success was characterized and by whom. Packed with larger-than-life characters from dedicated and ardent scientists to feuding Texas surgeons and brave patients, this book is a fascinating case study that speaks to questions of expectations, limitations, and uncertainty in a high-technology medical world.

Warfare in a High-Tech Age Sally Morgan, Adrian Morgan, 2007-10-02 No weapons system is foolproof. We'll always have one or two that go off target. Did you know that unmanned spy planes can detect and track targets and send data back to battle command as soon as it's gathered? That soldiers of the future may wear an exoskeleton powered by mechanical muscles? So what does all this mean for the waging of war? *Science at the Edge* focuses on the developments and theories in science that are giving rise to controversy and public concern.

Medical Technology Ann Fullick, 2011-07 This addition to the visually stimulating Sci Hi series looks at the application of science and new technologies to medicine and health, from drugs and surgery to scanners and robots, and how they affect our lives. It looks at new materials, discoveries, and inventions and assesses their environmental impact.

Germ Killers Sally Morgan, 2009-01-01 *Germ Killers: Fighting Disease* looks at how science and modern medicine save millions of lives each year and at the constant battle that is waged to stay ahead of new threats to health. It explains how diseases are caused and spread and how vaccination has successfully wiped out some major killers. It explores the importance of health education and aid in combating diseases such as cholera and TB, how drugs are developed and tested, and recent outbreaks of diseases such as West Nile Fever and *Clostridium difficile*.

Biometric Technology Mark Lockie, 2009-01-01 Examines ways in which an individual's identity can be verified, different ways this information can be used, and some issues concerning limitations and abuse of the technology.
