Taylor-Pickard, P. Spring, 2023-08-28 Globally pork and poultry production has become an extremely competitive industry There is now more pork consumed in the world than any other meat yet there is still intense competition for the industry to attract and retain consumers Consumers continue to demand safe high quality pork and poultry products at competitive prices compared to other high protein food alternatives To ensure sustainability of both the pig and poultry industries producers must endeavour to seek new technologies to improve production efficiency whilst lowering the cost of production and producing a quality product This edited collection of

articles is taken from a series of seminars that brought together some of the world's leading authorities in the field of pig and poultry nutrition and production. The fundamental theme is to re-examine the current trends in productivity within the pig and poultry industries and to identify nutritional and managerial means to improve competitiveness as well as the quality of the end product. The importance of animal health together with novel strategies for disease control and ways to minimise the environmental impact of pig and poultry production are covered. Gaining the edge in pork and poultry production is aimed at nutritionists and animal producers as well as students and researchers studying animal and applied biological sciences.

Feed efficiency in swine John F. Patience, 2012-10-15 Feed efficiency in swine has been prepared as a comprehensive treatise on the current state of our understanding of this topic which is so important to the pork industry. Each chapter is written by international authorities who understand both the science and application of their topic area. The book provides detailed insight into the many factors affecting feed efficiency ranging from diet processing to herd health from nutrition to physiology and from day to day barn management to the adoption of advanced technologies. The authors explain such practical aspects as the challenge of interpreting feed efficiency information obtained on farm or the role of liquid feeding. The authors also delve into more scientific topics such as amino acid or energy metabolism or animal physiology. This book is written for people who have a technical interest in pork production including nutritionists, geneticists, farm management specialists, veterinarians, other academics and of course pork producers.

The Welfare of Sheep Cathy Dwyer, 2008-07-15 Animal welfare is attracting increasing interest worldwide but particularly from those in developed countries who now have the knowledge and resources to be able to improve the welfare of farm animals. The increased attention given to farm animal welfare in the West derives largely from the fact that the relentless pursuit of financial reward and efficiency has led to the development of intensive animal production systems that disturb the conscience of many consumers. In developing countries human survival is still a daily uncertainty so that provision for animal welfare has to be balanced against human welfare. Welfare is usually provided for only if it supports the output of the animal be it food, work, clothing, sport or companionship. In reality there are resources for all if they are properly husbanded in both developing and developed countries. The inequitable division of the world's riches creates physical and psychological poverty for humans and animals alike in many sectors of the world. Livestock are the world's biggest land user. FAO 2002 and the population is increasing rapidly to meet the need of an expanding human population. Populations of farm animals managed by humans are therefore increasing worldwide and in some regions there is a tendency to allocate fewer resources such as labour to each animal with potentially adverse consequences on the animals' welfare.
